**GET READY  
TO START**

# WHAT'S IN THE BOX

**Your SMSEagle box contains:**

- SMSEagle hardware SMS gateway
- 8x External omnidirectional antenna
- AC Power cable
- Rack mounting brackets
- Quick start guide

## PREPARE FOR FIRST START

---

Your SMSEagle is designed so that you can set it up quickly and start using it right away. Follow the steps below to get started.

### STEP 1: Install antennas

---

#### ANTENNA INSTALLATION GUIDELINES

- Install antennas in a location with access to a cellular network radio signal.
- Antennas must be installed such that it provides a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with antenna from any other transmitter.
- Antennas must not be installed inside metal cases.

Screw antennas to the antenna connector on the back of the enclosure of SMSEagle device.

### STEP 2: Insert SIM Card

---

**Please install SIM Card when the device is SWITCHED OFF.** SIM Card slots is located on the front panel of the device. SIM metal contacts should face down when inserting SIM into slot.

### STEP 3: Power the device

---

The device is powered with AC power cable delivered in the box. The device needs a power source of 100-240V AC.

## PREPARE FOR FIRST START

---

### STEP 4: Configure IP settings

---

**SMSEAGLE** DEFAULT NETWORK CONFIGURATION:

**DHCP CLIENT IS ON**

(IP ADDRESS WILL BE OBTAINED AUTOMATICALLY FROM YOUR DHCP SERVER)

#### A) CONNECT SMSEAGLE TO YOUR LAN AND **OBTAIN IP ADDRESS AUTOMATICALLY**

- connect the device to your LAN using Ethernet cable and ETH1 port
- SMSEagle will obtain IP address automatically from your DHCP
- read assigned IP address on your DHCP server

#### B) **OR** SET IP ADDRESS FOR SMSEAGLE MANUALLY

- connect a display using HDMI connector, connect a keyboard to USB port (note: cables are not provided)
- login to the SSH console using root credentials (these were provided with your device)
- edit configuration file with command:  
*nano /opt/smseagle/syscfg*  
change the following lines:  
ETH1\_HOST\_IP= *(set IP address for your device)*  
ETH1\_GW\_IP= *(default gateway IP address)*  
ETH1\_NET\_MASK= *(set subnet mask)*  
ETH1\_START\_DHCP=Y *(set to ETH1\_START\_DHCP=N to disable DHCP client)*
- save and exit the file
- shutdown the device
- now connect SMSEagle to your LAN using Ethernet cable

## PREPARE FOR FIRST START

### C) LOG IN TO SMSEAGLE

Open an internet browser on your PC and go to the IP address assigned to your gateway

#### SMSEAGLE DEFAULT USER:

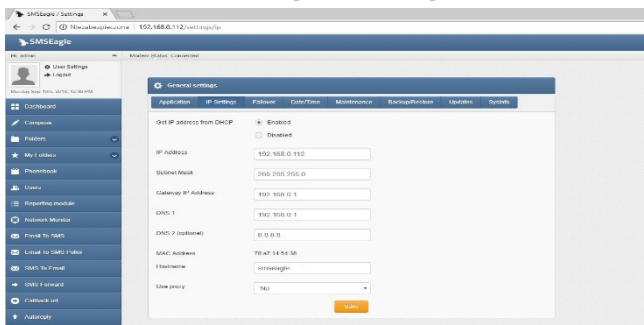

**Username:** admin

**Password:** password

*Login to application with above username and password.*

### D) CONFIGURE STATIC IP SETTINGS IN WEB-GUI (OPTIONAL)

Click on menu position "Settings" and navigate to tab "IP Settings".

Disable DHCP server. Enter your IP settings. > Press "Save" button.

Save

## PREPARE FOR FIRST START

---

### STEP 5: Setting SIM Cards PIN

---

This step should ONLY be done if your SIM-cards requires PIN.

If your SIM-card requires PIN number at startup, go to Settings > **Maintenance Tab**.

Enter your PIN number in the field "SIM Card PIN"

The screenshot shows a user interface for setting a SIM card PIN. On the left, there is a light gray box containing the text "SIM Card PIN" and an empty rectangular input field. To the right of this box, the text "> Press 'Save' button." is displayed. Further to the right is a separate light gray box containing an orange button with the word "Save" written on it.

### STEP 6: Installing custom SSL certificate and HTTPS-only (OPTIONAL)

---

#### Using HTTPS only

By default SMSEagle webGUI can be accessed via HTTP or HTTPS. For improved security we recommend using HTTPS. If you would like to redirect HTTP > HTTPS, follow this [knowledgebase article](#).

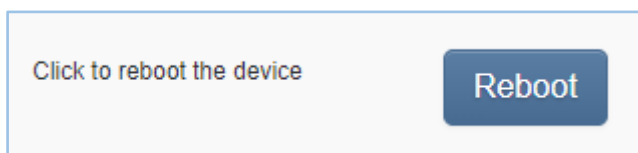

#### Installing your own SSL certificate

SMSEagle device comes with a self-signed SSL certificate. You may install your own SSL certificate or a free Let's Encrypt SSL certificate by following these [knowledgebase articles](#).

### STEP 7: Reboot the device

---

Go to Settings > Maintenance Tab. Press **Reboot** button.

The screenshot shows a user interface for rebooting the device. It features a light gray box containing the text "Click to reboot the device" on the left and a blue button with the word "Reboot" on the right.

# USING OF SMSEAGLE

# GET TO KNOW CONNECTORS, PORTS AND LED'S

## Front Panel

## Back Panel

Element	Label	Description
<b>Power switch</b>	-	Power switch to turn on/off the device
<b>Display</b>	-	Display screen
<b>User Switch</b>	SW	Switch to toggle information on the display, restore settings to factory defaults
<b>Status LED</b>	STATUS	LED indicating device status
<b>SIM slot</b>	-	8x SIM slot - mini size
<b>SIM Active LED</b>	ACTIVE	8x LED indicator for modem status
<b>Antenna</b>	ANT1-8	Antenna socket (SMA)
<b>Reset</b>	RESET	Switch for rebooting the device
<b>USB</b>	USB	2x USB 3.0 port

<b>Display ports</b>	DISPLAY	HDMI & Display Port (for debugging purposes only)
<b>Ethernet ports</b>	ETH1-2	Gigabit Ethernet RJ45 ports
<b>Power socket</b>	110-230VAC	Power socket

## Display

MHD-8100 display has 5 screens with different information on each screen. Using SW switch, you can change screens of the display.

### Screen 1: SMSEagle Logo

### Screen 2: System Usage

1. Device power on time
2. CPU usage in %
3. CPU temperature in Celcius
4. RAM usage in Mb and %

```
System usage
Up time: 0:00:29
CPU usage: 1%
CPU temp: 32.0 °C
RAM usage: 186M 19%
```

### Screen 3: Networking IP list

```
Networking
enp3s0 ip: 192.168.0.114
enp2s0 ip: 192.168.0.116
```

### Screen 4: Dashboard Statistics list of messages in

1. Inbox
2. Outbox
3. Sent items
4. Sent Errors

```
Dashboard statistics
Inbox: 0
Outbox: 0
Sent items: 0
SentErr: 0
```

### Screen 5: Modem signal strength list of all modems

```
Modem signal strength
T1: 📶      T5:
T2: 📶      T6:
T3: 📶      T7:
T4: 📶      T8:
```

## BASIC OPERATIONS

---

SMSEagle is capable to work in various screen resolutions, making it accessible for wide range of devices: computers, laptops, tablets, smartphones, etc.

Open a web browser on your device, type in SMSEagle's IP address (as set in previous chapter). At login screen type in your username/password. Default username and password is given in chapter **Prepare for First Start**.

## SMSEAGLE BASIC FEATURES

---

- Sending & Receiving SMS (managing messages with Inbox, Outbox, Sent Items)
- Smartphone-like conversation mode (messages are nicely grouped by phone number). You can easily track history of what you send and receive
- Sending to single numbers, contacts or groups from phonebook
- Import messages for sending from CSV file
- SMS Scheduling by specified date and time or delay
- Message templates (save & edit your own templates)

- Different message types (normal SMS, flash, WAP push, USSD codes)
- Unicode support (support of national characters)
- Multiuser support (each user has access to a private Inbox, Outbox, Sent Items)

## Compose SMS

---

Here we show the various ways of sending an SMS from your device.

*Screenshot of default Compose SMS view*

In Compose SMS users can:

- Send SMS to contact from phonebook, input manually or import from file
- When importing from file each column can be used as a placeholder in the message. During sending the placeholder will be replaced by a unique value for each imported row from CSV file.
- Set send date to now, at a date and time, after a delay, or between selected hours
- Select which modem to send message from
- Set duration validity of SMS
- Type of SMS, normal, flash, WAP Push Link or USSD Code
- Set a message template to be saved and used at another time
- Send as Unicode (for special character use)
- Send message or Send and Repeat (window remains open, allowing modifications to next message)

## Folders

Folders contain your messages. They are conveniently grouped into 5 categories:

- Inbox
- Outbox
- Sent Items
- Spam
- Trash

The view of conversations can be either of type “Baloons” (smartphone like conversation) or “Table” (tabular view). The view type can be changed in menu Settings > Application.

Baloons view type:

Table view type:

	Date	From/To	Created by	Message
<input type="checkbox"/>	3 minute ago	Micheal Johnson ↓		- Yes, that will work. Thank you!
<input type="checkbox"/>	4 minute ago	Micheal Johnson ↑	admin	- That's not a problem Michael. We have an opening at 11:30am on Tuesday next week, will that be a ...
<input type="checkbox"/>	7 minute ago	Micheal Johnson ↓		- I'm sorry but I'm going to have to cancel. Can we reschedule for next week at the same time?
<input type="checkbox"/>	9 minute ago	Micheal Johnson ↑	admin	- Hello Michael, This is a reminder of your appointment with Dr. Smith tomorrow (07/07/19) at 3:00...

## Phonebook

Web-GUI of SMSEagle device is equipped with Phonebook for managing contacts, groups and shifts. Each user can create private and public contacts, gather contacts in private and public groups. Contacts can also be optionally assigned to working shifts. Contacts and groups from Phonebook allows users efficient sending of messages.

### Phonebook Contacts

Below we present a main Phonebook view, where user manages his Contacts.

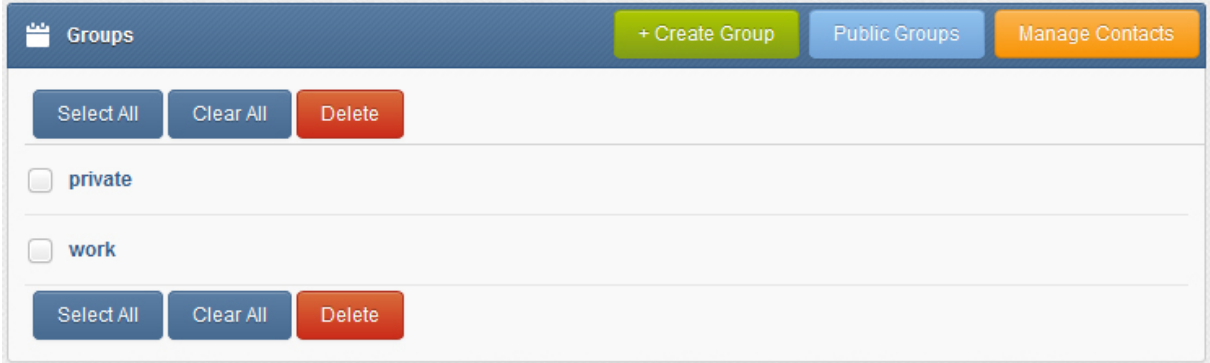

Screenshot of default phonebook view

In Phonebook Contact Management users can:

- Add/edit/delete contacts via web-gui
- Import contacts from CSV file
- Set contact to public or private visibility
- Add contacts to groups
- Add contacts to working shifts
- Send message to a contact
- View message conversation of a contact

Public contacts are visible to all users on the device while private contacts are visible to single user.

### Phonebook Groups

Screenshot taken from phonebook groups

In Phonebook Group Management view users can:

- Add/edit/delete groups
- Set groups to public or private visibility
- View group content (contacts belonging to the group)

- Send message to a group

## Phonebook Working Shifts

The Shift management feature allows to assign Phonebook contacts to work in shifts. If a contact is assigned to any working shift, before sending a message the device will check if the contact is on a working shift. If the contact is not on shift the message will be skipped or moved to beginning of a next shift. To start using working shifts define shifts here and add contact to a shift in contact details.

The Shift management feature allows to assign Phonebook contacts to working shifts. If a contact is assigned to any working shift, before sending a message the device will check if the contact is on a working shift. If the contact is not on shift the message will be skipped or moved to beginning of a next shift. To start using working shifts define shifts here and add contact to a shift in contact details.

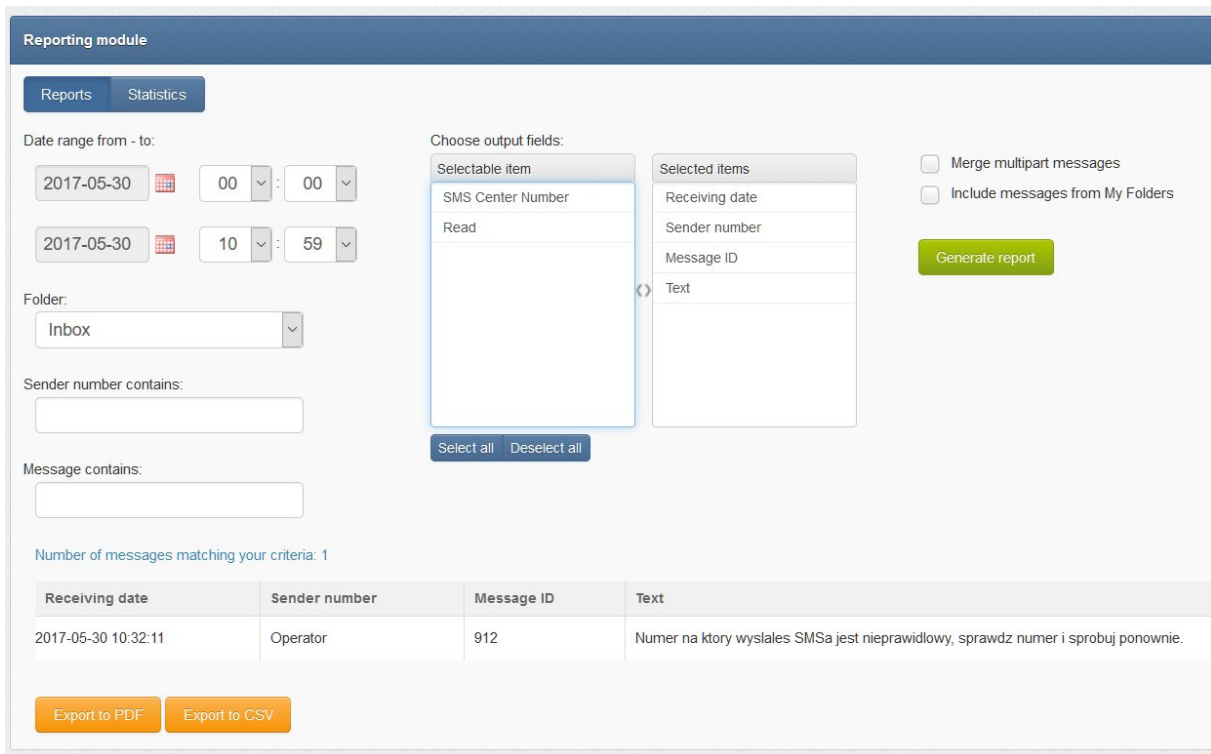

No.	Shift name	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday	Manage
1	A.Morning	08:00-16:00	08:00-16:00	08:00-16:00	08:00-16:00	08:00-16:00	-	-	Edit Delete Disable
2	B.Evening	16:00-23:59	16:00-23:59	16:00-23:58	16:00-23:59	16:00-23:59	-	-	Edit Delete Disable

When contact is not on shift:  Save

*Screenshot of shift management in phonebook*

## Reporting module

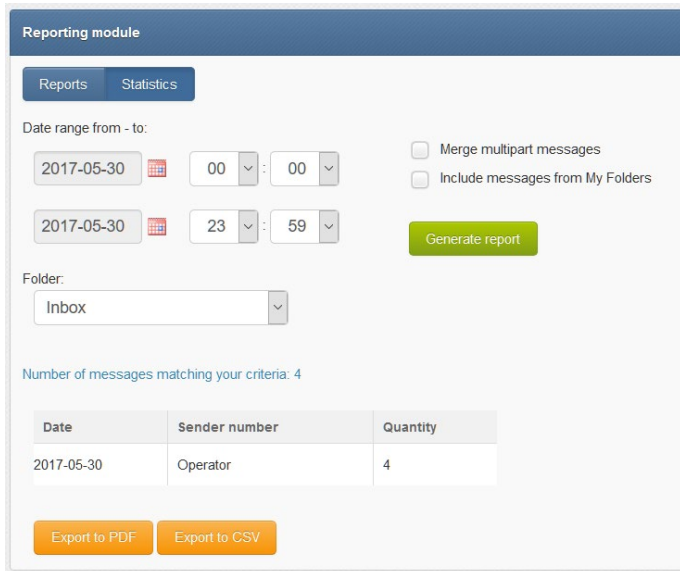

Reporting module is an extension of basic search feature. The module allows users to filter messages from Inbox/Sent items folders based on custom criteria and display filtered messages. Filtered list of messages can be exported to PDF or CSV file.

Screenshot of Reporting module

### Statistics view

The reporting module allows also to view daily statistics of sent/received messages. The statistics view displays number of messages per day and sender/receiver number.

Screenshot of Statistics view in Reporting module

### Settings

Settings menu is divided into several tabs for easier maintenance.

## Application settings

Application settings can be changed under the Settings Tab > Application.

**General settings**

Application | IP Settings | Failover | Date/Time | Maintenance | Backup/Restore | Updates | Sysinfo

Language: English

Country dial code: UNITED STATES (+1)

Conversation sort: Newest First

Conversation view type: Balloons

Data per Page: 15 Will be used for paging in message and phonebook

Permanent delete:  Permanent delete Off - Always move to Trash first  
 Permanent delete On

Delivery Report: Default

Inbox content is visible to: All users

Reporting module accessible for: All users

Enable autoresponder for incoming MMS messages: No

MMS autoresponder message: Warning: MMS messages are ignored. Please send your message again as SMS.

Sending delay between SMS: 0 in seconds (0 = no delay)

Save

- You can change the language of the application to English, French, German, Polish or Spanish
- You can change the country dial code to your country (this setting affects only correct assignment of phone numbers to phonebook entries)
- You can sort the conversation to show messages either “Newest First” or “Oldest First”
- You can change the conversation view to either “Table” (tabular view) or “Balloons” (smartphone-like view), as shown in Folders chapter
- You can adjust the amount of data displayed on one page to 10, 15, 20, 25, 50, 100, 250 or Show all
- You can set for the messages to be permanently deleted or be moved to Trash first
- You can set the receiving of delivery reports to Yes, No or Default (network carrier setting)
- You can set the visibility of the Inbox content to All users or Only admins
- You can set access of the reporting module to All users or Only admins
- You can enable the autoresponder for incoming MMS messages

- You can set the MMS autoresponder message
- You can set a delay between SMS sending in seconds (this setting may be useful for cases where cellular operator blocks a number due to intensive traffic. Note: setting delay between SMS sending also introduces a delay time between receiving SMS)

## SMSEAGLE PLUGINS

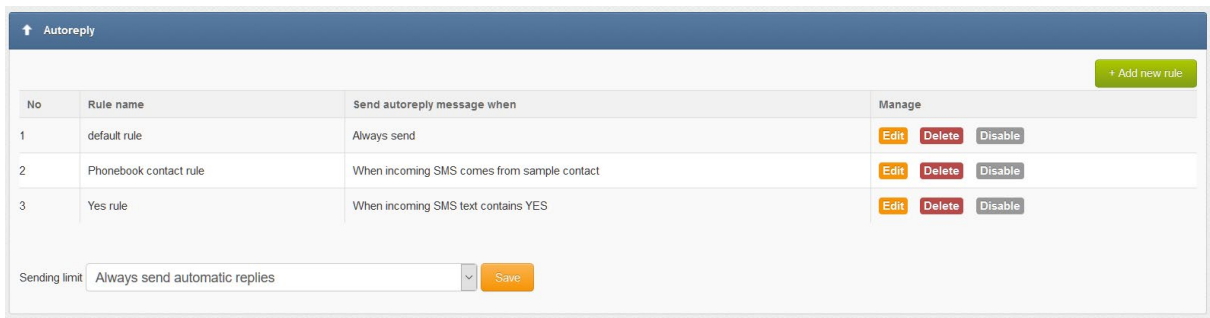

Basic features of SMSEagle software are extended by plugins that provide extra features to the software. Below you will find a description of plugins available in each SMSEagle device. All plugins are an integral part of SMSEagle software. That means that all described plugins are installed in a standard software of SMSEagle device and are available for free.

### Autoreply plugin

Plugin allows to automatically respond to each received message with defined text response.

#### PLUGIN CONFIGURATION

Plugin "Autoreply" allows to add many autoreply rules. Each rule can be enabled or disabled by user.

Screenshot from plugin main window

For each rule user can define:

- When autoreply message should be sent:
  - always,
  - when incoming message contains defined text,
  - and/or when message sender belongs to Phonebook contact/group
- If autoreply message text should be sent as Unicode characters

Plugin also allows to define sending limit for autoreply messages. It is possible to set limitation of max 5 messages / 10 minutes / phone number.

Add or edit Autoreply rule
✕

Rule name:

Send autoreply when: From specified senders / with specified message ▼

When incoming SMS comes from:

work ×

When incoming SMS text contains:

Autoreply message: 

Thank you for your message. Our representative will contact you shortly

Send as Unicode:

Save
Cancel

Screenshot form "Add/edit autoreply rule"

## Network Monitoring plugin

SMSEagle is equipped with network monitoring features. With that features you can monitor any device or service that operates ICMP, TCP, UDP or SNMP protocol. SMSEagle Network Monitoring plugin sequentially controls availability of defined hosts/services in Network Monitoring feature and sends defined SMS alert when host/service is unavailable/goes back to life or when SNMP return value reaches required criteria. Below you will find a brief overview of plugin capabilities.

### Control status of all your defined tasks

Network Monitor									
Tasks		Reports		+ Add new task					
No.	Task name	Host	Test type	Schedule	Alert when	SMS Recipient(s)	Status	Last Downtime	Manage
1	Email Server	localhost	TCP Port: 443	Always on	down, up and parent Router is up	123456789	■		<span>Edit</span> <span>Delete</span> <span>Disable</span>
2	Router	localhost	TCP Port: 80	Always on	down, up	987654321	■		<span>Edit</span> <span>Delete</span> <span>Disable</span>

Enable all tasks
Disable all tasks

- see a settings' overview for all of your tasks
- check which server/service is currently unavailable
- see when a specific server/service was last down (last downtime)
- check what happened at last downtime (see server/service response)
- edit/delete your tasks
- disable tasks when needed (e.g. when doing a machine upgrades)

### Define what you want to monitor in each task

The screenshot shows the 'Add Monitoring Task' form with the following fields and values:

- Task name:** Email Server
- Parent task:**  Router
- Host:** localhost (IP address or Hostname)
- Test type:**  ICMP (ping)  port TCP  port UDP  SNMP
- Port number:** 443
- Connect Timeout:** 30 (In seconds, increase this for busy servers)

- choose a name for the task
- set parent task. If parent task is defined, network monitor will monitor child task health only if parent task is healthy
- enter a host (IP address or Hostname)
- choose ICMP (ping) to monitor a server with ICMP protocol
- or PORT (TCP/UDP) to monitor your service on a selected port (SMSEagle will check if port is open)
- or SNMP to monitor objects via SNMP protocol (supported return types: numeric, string)
- increase a default timeout value for busy servers (by default we set it to 30 seconds)
- test the connection of server

### Define a schedule

The screenshot shows the 'Add Monitoring Task' form with the following fields and values:

- Number of requests:** 3
- Connect Timeout:** 30 (In seconds, increase this for busy servers)
- Test connection:**
- Active:**  Always on  Disable between specified hours
- Disable from:** 00 : 00 to: 00 : 00
- SMS Recipient(s):**  Phonebook public group(s)  Single number(s)
- SMS Recipient(s) value:** 123456789
- SMS sent when:**  host/service goes down  host/service goes up after failure

- choose if task should be always enabled...
- ...or disable it at chosen times  
(during a night, when a machine goes through planned restarts, during resource intensive backups, etc.)
- enter a phone number or choose a group of users to send your SMS alert to
- select when to send SMS alert (when host/service goes down, when host/service goes up after failure)

### Define a SMS alert message

SMS Text:  
when service goes  
down

This is automatic alert from SMSEagle Network-monitor. Alert from task: {TASKNAME}. Error was: {RESPONSE} Time generated: {TIMESTAMP}

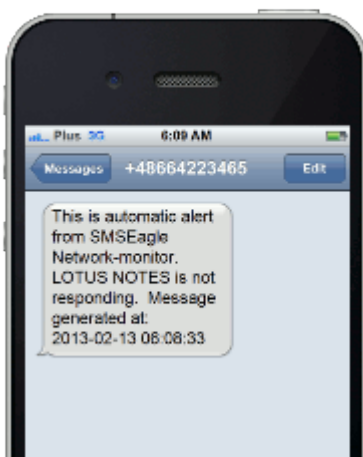

Placeholders for SMS Text:

{TASKNAME} - name of monitoring task  
{HOST} - host  
{RESPONSE} - error response from server/service  
{TIMESTAMP} - error timestamp

Define your SMS messages when host or service becomes unavailable/comes back to life. Choose field placeholders for your SMS text:

- {TASKNAME} – puts a taskname inside SMS text
- {HOST} – hostname or IP address
- {RESPONSE} – message received (in case of no response from server/service)
- {TIMESTAMP} – timestamp of an error

### Receive SMS alerts

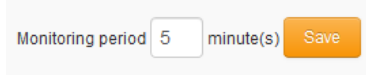

- be alerted when your services/servers go down (or go up after failure)
- give yourself a chance to react quickly

## MONITORING FREQUENCY

Monitoring tasks are performed in a parallel mode. Software automatically optimizes number of parallel tasks and frequency of tasks taking into account the performance of the device and adjusts monitoring period when needed.

You can manually increase/decrease monitoring period in Network Monitor settings:

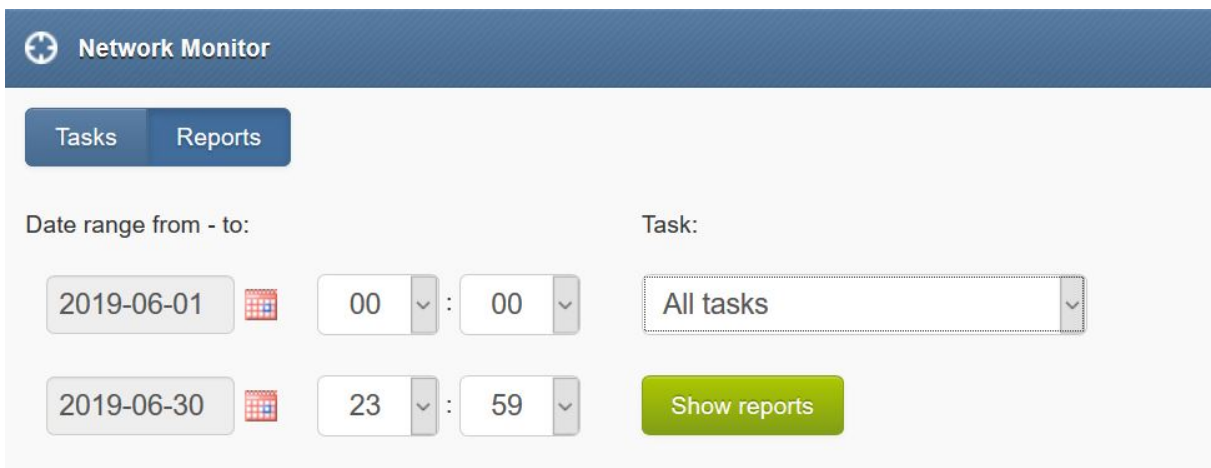

Monitoring period  minute(s)

If monitoring period value is too small (there are too many monitoring tasks to perform in parallel), the software will adjust the value to ensure optimal workload and performance of your device.

## REPORTS

This tab allows you to view reports of task errors in the Network Monitor for a selected period of time.

The screenshot shows the 'Network Monitor' interface with the 'Reports' tab selected. It features a date range selector from '2019-06-01' to '2019-06-30' with time pickers for '00:00' and '23:59'. A 'Task:' dropdown menu is set to 'All tasks', and a green 'Show reports' button is visible.

*Screenshot from Network Monitor > Reports window.*

## Email to SMS plugin

Email To SMS plugin allows you to convert an email to SMS message.

### BASIC USAGE

If the plugin is enabled, email sent to the email address:

**PHONE\_NUMBER@IP\_ADDRESS\_OF\_SMSEAGLE** will be converted to SMS message.

**PHONE\_NUMBER** is a destination phone number

**IP\_ADDRESS\_OF\_SMSEAGLE** is the IP address of your device.

The text of the email is the text of the SMS message (optionally you can append email subject at the beginning of SMS message).

Example: email message sent to the address: 123456789@192.168.0.101 will be converted to SMS message and delivered to phone number 123456789.

#### SEND TO USERNAME/GROUP

Email sent to the email address:

**NAME\_IN\_PHONEBOOK@IP\_ADDRESS\_OF\_SMSEAGLE** will be converted to SMS message and will be sent to a user or users group from SMSEagle's phonebook.

**NAME\_IN\_PHONEBOOK** is a username or group name (must be a public group) from SMSEagle's phonebook

**IP\_ADDRESS\_OF\_SMSEAGLE** is the IP address of your device.

The text of the email is the text of the SMS message (optionally you can append email subject at the beginning of SMS message).

Example: email message sent to the address: db-admins@192.168.0.101 will be converted to SMS message and delivered to all members of db-admin group. The db-admin group must be defined in your SMSEagle phonebook.

#### USING FQDN IN EMAIL ADDRESS

It is also possible to use Fully Qualified Domain Name in an email address sent to SMSEagle box (eg.: 123456789@mydomain.com). Please refer to our FAQ article: [How do I configure Email2SMS plugin to accept FQDN email addresses](#) for more details.

#### EMAIL SUBJECT - ADDITIONAL PARAMETERS (OPTIONAL)

It is possible to set additional flags for single converted message using email subject. Currently the following flags are available:

- **date** - date and time in format YYYYmmDDHHMM (YYYY – year, mm – month, DD – day, HH – hour, MM – minute). If this parameter is not null SMS will be scheduled for sending at the given date and time
- **modem\_no** - sets sending modem number (available only for multimodem devices)

If you send email with subject containing FLAG=VALUE the flag will be set for this particular email2SMS message.

Example 1: email message with subject containing **modem\_no=2** will be converted to SMS message and sent via modem number 2.

Example 2: email message with subject containing **date=201801010005&modem\_no=2** will be converted to SMS message and sent on 2018-01-01 00:05 via modem number 2.

## PLUGIN CONFIGURATION

✉ Email To SMS settings

Enable Email To SMS

Email2SMS service status Enabled

What to do with email subject

If authentication is enabled provide SMSEagle user and password or access token in the email subject.  
Use the following syntax: login=john&pass=doe or access\_token=token  
(replace john doe / token with your own user and pass / token)

Maximum number of characters in SMS   
Value should be between 1 and 1300

Unicode encoding of SMS text   
This should be enabled only when you want to include special national c

Save

*Screenshot from Email to SMS settings*

- if you want to use the plugin, set 'Email2SMS active' to 'Yes'
- if you want to include a subject of an email in SMS message, set 'What to do with email subject' setting to 'Include in SMS'. The email subject will be appended at the beginning of SMS message
- if you want to use user authentication, set 'What to do with email subject' setting to 'Use for authentication'. If user authentication is enabled, provide in a subject of an email your login and password in the following form: login=john&pass=doe OR provide API access token in the following form: access\_token=token
- if you want to include only a subject of an email in SMS message, set 'What to do with email subject' setting to 'Send only subject without email body'. Only the email subject will be inserted in SMS message
- the text of an email will be cropped to the value 'Maximum number of characters'. Maximum allowed length of SMS message is 1300 characters
- if you want to include in SMS message special national characters (like äääöß 我) set "Unicode encoding of SMS text" to 'Yes'

## Email to SMS Poller

---

Email2SMS Poller is an alternative for Email2SMS plugin for converting emails to SMS messages. This plugin should be used when you need to fetch emails from an existing mailbox on your mail server. The Email2SMS Poller plugin connects to a configured email account and polls it in specified periods of time for new emails. Once a new email is received, it is automatically converted to an SMS message.

The plugin supports POP3 and IMAP accounts.

To send an SMS using Email2SMS Poller you have to send an email to a specified email account, with the email subject containing a mobile number (or multiple phone numbers separated with comma) or phonebook contact/group name.

### BASIC EXAMPLE

For example, such email message:

TO: [smseagle@mycompany.com](mailto:smseagle@mycompany.com)  
FROM: [john.doe@mycompany.com](mailto:john.doe@mycompany.com)  
SUBJECT: +48333444555  
BODY: Hello world!

In this case SMSEagle gateway will fetch an incoming email from [smseagle@mycompany.com](mailto:smseagle@mycompany.com) account and send its body as SMS message to +48333444555 mobile number.

### SEND TO USERNAME/GROUP

If you want to send SMS to a contact or group from SMSEagle phonebook, put the contact/group name in SUBJECT field.

Notice:

Messages that are processed by Email2SMS Poller (but not deleted) are marked in the mailbox as read. Software is based on flagging messages- Read/Unread. Marking a read message in the mailbox as unread will result in being processed again by Email2SMS Poller. We suggest using a separate email account to avoid situation with resending the same message (marking unread already processed read message).

## PLUGIN CONFIGURATION

### Email To SMS Poller

Enable Email to SMS Poller

Email2SMS poller service status **Enabled**

Check for email every   
Time in seconds

Maximum number of characters in SMS   
Value should be between 1 and 1300

Unicode encoding of SMS text   
This should be enabled only when you want to include special national chars (like 我) in SMS message

Protocol

Host

Port   
Standard email services ports: POP3: 110, POP3 (TLS/SSL): 995, IMAP: 143, IMAP (TLS/SSL): 993

Username

Password

Use TLS/SSL encryption

Delete emails from server after processing

Screenshot from Email to SMS Poller

- if you want to use the plugin, set 'Enable Email2SMS Poller' to 'Yes'
- Set email fetching interval (in seconds)
- the text of an email will be cropped to the value 'Maximum number of characters'. Maximum allowed length of SMS message is 1300 characters.
- If you want to include special national characters, enable "Unicode encoding of SMS text"
- Choose protocol from IMAP or POP3
- Provide mailbox configuration (host, port, user, password, encryption settings)
- If you want to delete emails from the mailbox after they are fetched by Email2SMS Poller, please mark "Delete emails from server after processing"

## SMS to Email plugin

---

SMS to Email plugin allows you to forward incoming SMS messages to email address.

The plugin can be used in two modes:

- a. forwarding of incoming SMS to email of last sender (so called **Two-way Email2SMS & SMS2Email**)  
In this mode, when SMSEagle receives incoming SMS, it checks if earlier anyone was sending SMS to the number from incoming SMS using Email2SMS. If last sender is found, the incoming SMS is forwarded to the email address of last sender. If no last sender is found, then the incoming message is forwarded to a default email address given in plugin settings.
- b. It forwards all the incoming messages to one fixed email address.  
In this mode all incoming SMS messages are forwarded to always the same email address.

Plugin uses an external SMTP server for sending emails.

### PLUGIN CONFIGURATION

 SMS to Email Settings

Enable forwarding to email

Type of email forwarding

Forward to Email address

Email subject

Enter your SMTP server settings for sending emails (required):

SMTP Host

SMTP Port

SMTP Connection encryption

Username   
Leave blank if SMTP authentication is not required

Password   
Leave blank if SMTP authentication is not required

Sender email

## Screenshot from SMS to Email settings

- if you want to use the plugin, set 'Enable forwarding to email' to 'Yes'
- choose a type of email forwarding: "To email of last sending user" (so called "Two-way Email2SMS & SMS&Email") or "To fixed email address"
- enter an email subject
- enter SMTP configuration for your SMTP server that will be used for sending emails

## EMAIL TEXT FROM PLUGIN

Email body from SMS To Email plugin contains:

- phone number from incoming SMS (and phonebook contact name if found)
- Date, time when SMS is received
- SMS message

### Example email text:

From: +483334455 (John Doe)

Received: 2017-06-01 14:38:12

Message: My SMS message

## Callback URL plugin

Callback URL plugin allows you to forward incoming SMS message to a defined URL address. If the plugin is enabled, on each incoming SMS message SMSEagle will trigger HTTP(S) request to a defined URL. HTTP(S) request can be of type GET or POST.

## PLUGIN CONFIGURATION

Plugin "Callback URL" allows to add unlimited number of rules. Each rule can be enabled or disabled by user.

Callback url settings

No.	Rule name	Send callback when	Manage
1	Test 1	Always send	<a href="#">Edit</a> <a href="#">Delete</a> <a href="#">Disable</a>
2	Test 2	Always send	<a href="#">Edit</a> <a href="#">Delete</a> <a href="#">Disable</a>

**Parameter description:**  
The request sent via a GET/POST to your URL have the following parameters:  
**sender:** Sender number  
**timestamp:** Time when SMSEagle received the message in the following format YYYYmmddHHss (example: 20140531092257)  
**text:** Content of the SMS message  
**text\_binary:** Binary content of SMS message  
**msid:** SMSEagle message id  
**modemno:** Modem number on which incoming message was received  
**oid:** Value of OID identifier assigned to outgoing message with matching phone number (optional)  
**apikey:** API key of your service (optional)

SMSEagle will be expecting HTTP response: **200 [OK]**

**Request string example for HTTP GET:**  
?sender=48601123123&timestamp=20140531092257&msid=431&modemno=1&text=This+is+an+incoming+message

Retry interval after failed request (in minutes)  [Save](#)

## Screenshot from Callback URL settings

For each new rule user has to fill in the requested fields:

- 'URL' field defines remote address of your callback script
- 'Test URL' button allows to test whether your Callback URL configuration is correct. SMSEagle will make a callback request with test parameters and will verify the response of remote server
- 'URL method' allows to choose whether callback to your URL is done with HTTP(S) GET or POST method
- "Send request when" defines if the request is always sent, sent only when SMS sender belongs to a given contact/group or only when incoming message contains a given character string
- Optionally you can define "API key of your service" value. This will be passed to your callback URL in parameter 'apikey'. If you leave the field blank, 'apikey' parameter will not be passed to your callback URL
- User may also choose whether to enable support of self-signed SSL certificate

The screenshot shows a dialog box titled "Add or edit Callback URL rule". It contains the following fields and controls:

- Rule name: Text input field with "Test 1" entered.
- URL: Text input field with "https://test.com" entered.
- Test URL: A blue button with white text.
- URL method: A dropdown menu with "GET" selected.
- Send request when: A dropdown menu with "All incoming messages" selected.
- API key of your service: An empty text input field.
- A note: "You can set additional API key that is expected by your service (to increase security)".
- Allow self-signed SSL certificate: A checkbox that is unchecked.
- Verify peer: A checkbox that is unchecked.
- Verify peer name: A checkbox that is unchecked.
- Save: An orange button.
- Cancel: A blue button.

After sending HTTP(S) GET/POST request to your callback URL, SMSEagle will be expecting HTTP response: 200 [OK]. If other or no response is received from your callback URL, SMSEagle will keep retrying every X minutes for 24 hours. Retry interval can be set in main plugin Window:

The screenshot shows a section of the main plugin window with the following content:

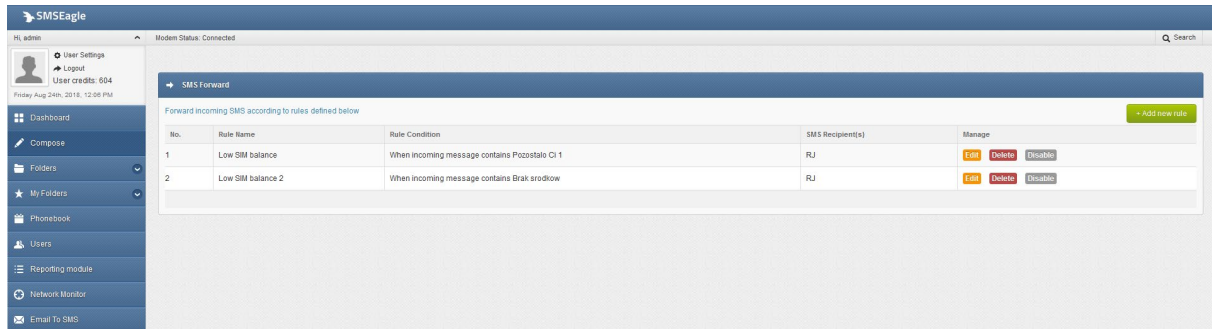

Retry interval after failed request (in minutes)

## SMS Forward

The plugin “SMS forward” allows to forward incoming SMS messages to one/may recipients according to defined rules.

### PLUGIN CONFIGURATION

Plugin “SMS Forward” allows to add many forwarding rules. Each rule can be enabled or disabled by user.

Screenshot from plugin main window

For each rule user can define:

- When incoming SMS should be forwarded (Rule type) and to what number(s) the message should be forwarded (SMS Recipient).
- Whether or not include in SMS a sender number from which original SMS came from.
- When defining a rule user can choose SMS recipient (who gets the forwarded SMS). It can be either phone number or name of group from phonebook.
- User may define many forwarding rules in the plugin.
- Message header can be set to include original sender number or not to include.
- Each rule is processed independently.
- There is a possibility to enable/disable each rule.

Rule name: Low SIM balance 2

Message header: Don't include

Forward: From specified senders / with specified message

When incoming SMS comes from:

When incoming SMS text contains:  
Brak srodkow

Forward to: warehouse

Save Cancel

Screenshot form “Add/edit forwarding rule”

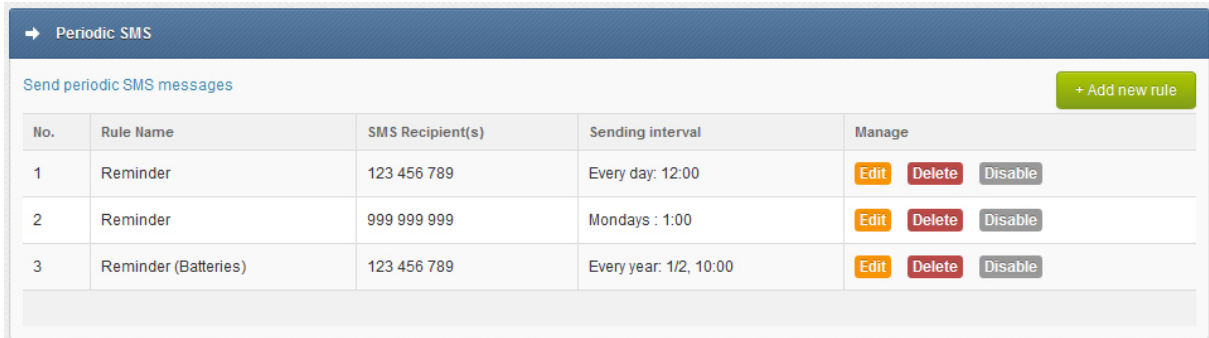

## Periodic SMS

---

The plugin “Periodic SMS” allows to send SMS messages or USSD codes at a desired time interval. User may define many sending rules, and each rule will be processed independently.

### PLUGIN CONFIGURATION

Plugin “Periodic SMS” allows to add many sending rules. Each rule can be enabled or disabled by user.

No.	Rule Name	SMS Recipient(s)	Sending interval	Manage
1	Reminder	123 456 789	Every day: 12:00	<a href="#">Edit</a> <a href="#">Delete</a> <a href="#">Disable</a>
2	Reminder	999 999 999	Mondays : 1:00	<a href="#">Edit</a> <a href="#">Delete</a> <a href="#">Disable</a>
3	Reminder (Batteries)	123 456 789	Every year: 1/2, 10:00	<a href="#">Edit</a> <a href="#">Delete</a> <a href="#">Disable</a>

*Screenshot from main plugin window*

For each rule the user can define:

- The rule name
- Sending interval (Hourly, Daily, Weekly, Monthly or Annually)
- Message type (SMS, USSD Code)
- The content of the SMS text
- The recipients (phone number(s) separated with comma or group(s) from phonebook)

**Add or edit sending rule** ✕

Rule name:

Sending interval:  ▾

Every year:  📅 Month-Day  ▾ Hour  ▾

Minute

Message type:  ▾

SMS Text:

SMS Recipient(s):  Phonebook public group(s)  Single number(s)

✕

*Screenshot from "Add new rule" window*

## Blacklist

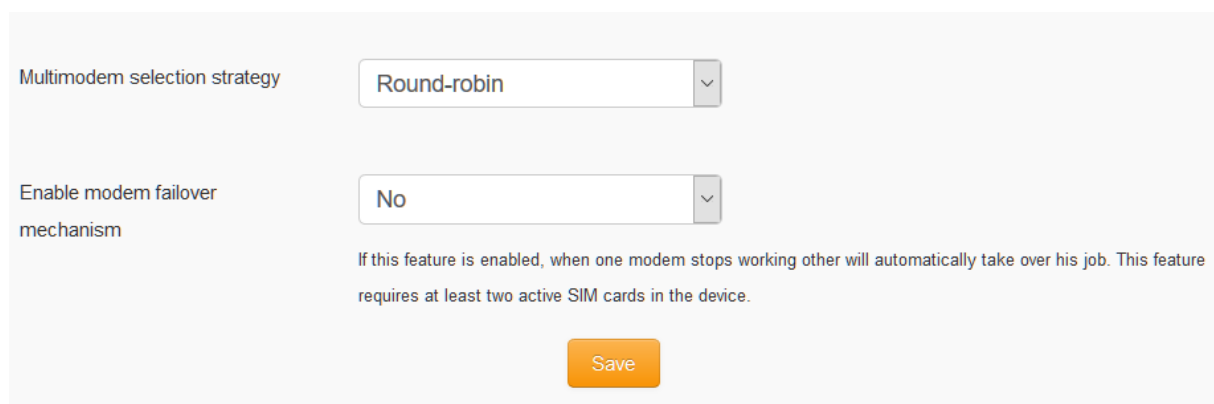

---

This feature allows you to add a number to a Blacklist. When a number is on this list, the device automatically blocks any sent and received SMS from the number as well as deletes the messages from your inbox.

## MULTIMODEM FEATURES

---

SMSEagle MHD-8100 device is equipped with eight built-in modems. You can manage modem settings in web-gui menu Settings > Maintenance Tab. There are following options available for multimodem device:

Multimodem selection strategy

Enable modem failover mechanism

If this feature is enabled, when one modem stops working other will automatically take over his job. This feature requires at least two active SIM cards in the device.

### Multimodem selection strategy

This setting is responsible for modem choice strategy when sending SMS messages from SMSEagle. The following options are possible:

- Round-robin  
In this strategy modems are selected sequentially one-by-one when sending out SMS messages. This means that device sends messages using modem1 > modem2 > modem3 > modem4, etc.
- SIMX as Master modem  
In this strategy modemX is always selected when sending out SMS messages. If failover is enabled (see below) other modems will be always used as a backup in failover strategy

### Enable modem failover mechanism

If this setting is enabled, when one modem stops working other will automatically take over his job. This feature requires at least two active SIM cards in the device. The health check for each modem is performed with 3 minutes frequency. If during a health check a modem is not connected to network the other will automatically take over his jobs (including messages waiting in Outbox folder).

## SMSEAGLE API

---

SMSEagle has powerful built-in REST API functionalities. API is dedicated for integration of SMSEagle with any external system or application. Below you will find a detailed description of API functionalities.

**Please note, that SMSEagle API supports both HTTP and HTTPS protocol.**

For your convenience sample usage of SMSEagle's API in most popular programming languages are available at: <http://www.smseagle.eu/code-samples/>

### 0. API Authentication

Before you can start using API, first you need to enable API access.

- a) go to WebGUI > Users
- b) create a new User with access level "User", set "Access to API" to "On" (optionally you may limit access only to selected API methods)
- c) choose API authentication method. This can be either:
  - access\_token (*recommended solution*)  
Edit your API User > check "Enable token" and generate new access token. The token will be used to authenticate in API methods  
or
  - b) login and password  
Use your API User credentials to authenticate in API methods

#### EXAMPLES OF AUTHENTICATION:

- with access token  
`https://url-of-smseagle/http_api/send_sms?access_token=0001gOjCO1MH8F2q`
- with login and password  
`https://url-of-smseagle/http_api/send_sms?login=john&pass=doe`

API credentials created here will be used to authenticate in all API methods (see descriptions below).

### 1. Send SMS: HTTP GET method

#### HTTP GET METHOD:

`https://url-of-smseagle/http_api/send_sms`

#### PARAMETERS:

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
to	recipient telephone number (or numbers separated with comma)
message	your SMS message

date	<i>(optional parameter)</i> date and time in format YYYYmmDDHHMM (YYYY – year, mm – month, DD – day, HH – hour, MM – minute). If this parameter is not null SMS will be scheduled for sending at the given date and time
highpriority	<i>(optional parameter)</i> 0 = normal priority, 1 = SMS will have higher priority in Outbox queue when processed by GSM-modem
unicode	<i>(optional parameter)</i> 0 = no Unicode encoding (default), 1 = SMS will be encoded using Unicode (you can send national characters)
flash	<i>(optional parameter)</i> 0 = normal SMS (default), 1 = SMS will be sent as flash message
oid	<i>(optional parameter)</i> This attribute specifies a user-defined unique ID that is assigned to a message-recipient pair. The oid is a varchar (36) that uniquely identifies a message sent to a particular recipient (particular phone number). The value of this ID allows client applications to match incoming reply messages to outgoing messages. If no oid was assigned to the outgoing message this attribute will have a value of null for incoming message.  The oid value will be automatically assigned to incoming message only if incoming phone number matches exactly the phone number (including country code) from outgoing message.
modem_no	<i>(optional parameter)</i> sending modem number (only for multimodem devices)
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object
validity	<i>(optional parameter)</i> How long will be the message valid. If message expires before it is received by a phone, the message will be discarded by cellular network. Acceptable parameter values: 5m, 10m, 30m, 1h, 2h, 4h, 12h, 1d, 2d, 5d, 1w, 2w, 4w, max. Default value: max
send_after	<i>(optional parameter)</i> send a message after specified time. It can be used to prevent messages from being sent at night. Format: HH:MM:SS (HH – hour, MM – minute, SS – second)
send_before	<i>(optional parameter)</i> send a message before specified time. It can be used to prevent messages from being sent at night. Format: HH:MM:SS (HH – hour, MM – minute, SS – second)

#### EXAMPLES:

```
https://url-of-smseagle/http_api/send_sms?
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&to=1234567&message=mymessage
```

```
https://url-of-smseagle/http_api/send_sms?
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&to=1234567&message=mymessage&
date=201401152132
```

```
https://url-of-smseagle/http_api/send_sms?
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&to=1234567&message=mymessage&
highpriority=1
```

## RESPONSE:

Response: **OK; ID=[ID of message in outbox]**

Sample response: OK; ID=297

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters): **Wrong parameters**

## RESPONSE (XML):

Response:

```
<xml>
  <message_id>[ID of message in outbox]</message_id>
  <status>ok</status>
</xml>
```

Sample response:

```
<xml>
  <message_id>297</message_id>
  <status>ok</status>
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong parameters</error_text>
  <status>error</status>
</xml>
```

*Important notice: You must encode URL before sending it to gateway if you use national characters in SMS message text.*

## 2. Send SMS: JSONRPC method

## HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

## PARAMETERS:

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
to	recipient telephone number (or numbers separated with comma)
message	your SMS message
date	<i>(optional parameter)</i> date and time in format YYYYmmDDHHMM (YYYY – year, mm – month, DD – day, HH – hour, MM – minute). If this parameter is not null SMS will be scheduled for sending at the given date and time
highpriority	<i>(optional parameter)</i> 0 = normal priority, 1 = SMS will have higher priority in Outbox queue when processed by GSM-modem
unicode	<i>(optional parameter)</i> 0 = no Unicode encoding (default), 1 = SMS will be encoded using Unicode (you can send national characters)
flash	<i>(optional parameter)</i> 0 = normal SMS (default), 1 = SMS will be sent as flash message
oid	<i>(optional parameter)</i> This attribute specifies a user-defined unique ID that is assigned to a message-recipient pair. The oid is a varchar(36) that uniquely identifies a message sent to a particular recipient (particular phone number). The value of this ID allows client applications to match incoming reply messages to outgoing messages. If no oid was assigned to the outgoing message this attribute will have a value of null for incoming message.  The oid value will be automatically assigned to incoming message only if incoming phone number matches exactly the phone number (including country code) from outgoing message.
modem_no	<i>(optional parameter)</i> sending modem number (only for multimodem devices)
responsetype	<i>(optional parameter)</i> simple = format response as simple object with one result field (default), extended = format response as extended JSON object
validity	<i>(optional parameter)</i> How long will be the message valid. If message expires before it is received by a phone, the message will be discarded by cellular network. Acceptable parameter values: 5m, 10m, 30m, 1h, 2h, 4h, 12h, 1d, 2d, 5d, 1w, 2w, 4w, max. Default value: max
send_after	<i>(optional parameter)</i> send a message after specified time. It can be used to prevent messages from being sent at night. Format: HH:MM:SS (HH – hour, MM – minute, SS – second)
send_before	<i>(optional parameter)</i> send a message before specified time. It can be used to prevent messages from being sent at night. Format: HH:MM:SS (HH – hour, MM – minute, SS – second)

#### SAMPLE BODY:

```
{ "method": "sms.send_sms",
  "params": { "access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "to": "481234567", "message": "My message" } }
or
{ "method": "sms.send_sms",
  "params": { "access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "to": "481234567", "message": "My message", "date": "201401152132" } }
or
{ "method": "sms.send_sms",
  "params": { "access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "to": "481234567", "message": "My message", "highpriority": "1" } }
```

#### RESPONSE:

Response: {"result": "OK; ID=[ID of message in outbox]"}

Sample response: {"result": "OK; ID=297"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters): {"result": "Wrong parameters"}

#### RESPONSE (EXTENDED):

Response:

```
{"result": { "message_id": "[ID of message in outbox]", "status": "ok" } }
```

Sample response: {"result": { "message\_id": "748", "status": "ok" } }

Sample response when parameter "to" contains multiple phone numbers:

```
{"result": [ { "message_id": "3643", "status": "ok" }, { "message_id": "3644", "status": "ok" }, { "message_id": "3645", "status": "ok" }, { "message_id": "3646", "status": "ok" }, { "message_id": "3647", "status": "ok" } ] }
```

Response (when wrong logindata):

```
{"result": { "error_text": "Invalid login or password", "status": "error" } }
```

Response (when wrong access token):

```
{"result": { "error_text": "Invalid access token", "status": "error" } }
```

Response (when wrong parameters):

```
{"result": { "error_text": "Wrong parameters", "status": "error" } }
```

### 3. Send SMS to a group: HTTP GET method

#### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/send\\_togroup](https://url-of-smseagle/http_api/send_togroup)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)

pass	your password to login to SMSEagle
groupname	group name defined in your SMSEagle Phonebook. The group must be defined as Public
message	your SMS message
date	<i>(optional parameter)</i> date and time in format YYYYmmDDHHMM (YYYY – year, mm – month, DD – day, HH – hour, MM – minute). If this parameter is not null SMS will be scheduled for sending at the given date and time
highpriority	<i>(optional parameter)</i> 0 = normal priority, 1 = SMS will have higher priority in Outbox queue when processed by GSM-modem
unicode	<i>(optional parameter)</i> 0 = no Unicode encoding (default), 1 = SMS will be encoded using Unicode (you can send national characters)
flash	<i>(optional parameter)</i> 0 = normal SMS (default), 1 = SMS will be sent as flash message
modem_no	<i>(optional parameter)</i> sending modem number (only for multimodem devices)
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object
validity	<i>(optional parameter)</i> How long will be the message valid. If message expires before it is received by a phone, the message will be discarded by cellular network. Acceptable parameter values: 5m, 10m, 30m, 1h, 2h, 4h, 12h, 1d, 2d, 5d, 1w, 2w, 4w, max. Default value: max
send_after	<i>(optional parameter)</i> send a message after specified time. It can be used to prevent messages from being sent at night. Format: HH:MM:SS (HH – hour, MM – minute, SS – second)
send_before	<i>(optional parameter)</i> send a message before specified time. It can be used to prevent messages from being sent at night. Format: HH:MM:SS (HH – hour, MM – minute, SS – second)

#### EXAMPLES:

```
https://url-of-smseagle/http_api/send_togroup?
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&groupname=admins&message=mymessage
```

```
https://url-of-smseagle/http_api/send_togroup?
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&groupname=admins&message=mymessage&date=201401152132
```

```
https://url-of-smseagle/http_api/send_togroup?
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&groupname=admins&message=mymessage&highpriority=1
```

#### RESPONSE:

Response: **OK; ID=[ID of message in outbox]**

Sample response: OK; ID=297

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters): **Wrong parameters**

#### RESPONSE (XML):

Response:

```
<xml>
  <message_id>[ID of message in outbox]</message_id>
  <status>ok</status>
</xml>
```

Sample response:

```
<xml>
  <message_id>297</message_id>
  <status>ok</status>
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong parameters</error_text>
  <status>error</status>
</xml>
```

## 4. Send SMS to a group: JSONRPC method

#### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle

groupname	group name defined in your SMSEagle Phonebook. The group must be defined as Public
message	your SMS message
date	<i>(optional parameter)</i> date and time in format YYYYmmDDHHMM (YYYY – year, mm – month, DD – day, HH – hour, MM – minute). If this parameter is not null SMS will be scheduled for sending at the given date and time
highpriority	<i>(optional parameter)</i> 0 = normal priority, 1 = SMS will have higher priority in Outbox queue when processed by GSM-modem
unicode	<i>(optional parameter)</i> 0 = no Unicode encoding (default), 1 = SMS will be encoded using Unicode (you can send national characters)
flash	<i>(optional parameter)</i> 0 = normal SMS (default), 1 = SMS will be sent as flash message
modem_no	<i>(optional parameter)</i> sending modem number (only for multimodem devices)
responsetype	<i>(optional parameter)</i> simple = format response as simple object with one result field (default), extended = format response as extended JSON object
validity	<i>(optional parameter)</i> How long will be the message valid. If message expires before it is received by a phone, the message will be discarded by cellular network. Acceptable parameter values: 5m, 10m, 30m, 1h, 2h, 4h, 12h, 1d, 2d, 5d, 1w, 2w, 4w, max. Default value: max
send_after	<i>(optional parameter)</i> send a message after specified time. It can be used to prevent messages from being sent at night. Format: HH:MM:SS (HH – hour, MM – minute, SS – second)
send_before	<i>(optional parameter)</i> send a message before specified time. It can be used to prevent messages from being sent at night. Format: HH:MM:SS (HH – hour, MM – minute, SS – second)

#### EXAMPLES:

```

{"method":"sms.send_togroup",
"params":{"access_token":"0005gOjCO1MH8F2BPo8mWqcGzycVHRLq","groupname":"ad
mins","message":"mymessage"}}
or
{"method":"sms.send_togroup",
"params":{"access_token":"0005gOjCO1MH8F2BPo8mWqcGzycVHRLq","groupname":"ad
mins","message":"mymessage","date":"201401152132"}}
or
{"method":"sms.send_togroup",
"params":{"access_token":"0005gOjCO1MH8F2BPo8mWqcGzycVHRLq","groupname":"ad
mins","message":"mymessage","highpriority":"1"}}

```

#### RESPONSE:

Response: {"result": "OK; ID=[ID of message in outbox]"}

Sample response: {"result": "OK; ID=[297]"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters): {"result": "Wrong parameters"}

#### RESPONSE (EXTENDED):

Response:

```
{"result": {"message_id":"[ID of message in outbox]","status":"ok"}}
```

Sample response: {"result": {"message\_id":"748","status":"ok"}}

Response (when wrong logindata):

```
{"result": {"error_text":"Invalid login or password","status":"error"}}
```

*Response (when wrong access token):*

```
{"result": {"error_text":"Invalid access token","status":"error"}}
```

Response (when wrong parameters):

```
{"result": {"error_text":"Wrong parameters","status":"error"}}
```

## 5. Send SMS to contact: HTTP GET method

#### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/send\\_tocontact](https://url-of-smseagle/http_api/send_tocontact)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
contactname	contact name (or names separated by comma) defined in your SMSEagle Phonebook. Contacts must be defined as Public
message	your SMS message
date	<i>(optional parameter)</i> date and time in format YYYYmmDDHHMM (YYYY – year, mm – month, DD – day, HH – hour, MM – minute). If this parameter is not null SMS will be scheduled for sending at the given date and time
highpriority	<i>(optional parameter)</i> 0 = normal priority, 1 = SMS will have higher priority in Outbox queue when processed by GSM-modem
unicode	<i>(optional parameter)</i> 0 = no Unicode encoding (default), 1 = SMS will be encoded using Unicode (you can send national characters)
flash	<i>(optional parameter)</i> 0 = normal SMS (default), 1 = SMS will be sent as flash message
modem_no	<i>(optional parameter)</i> sending modem number (only for multimodem devices)
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

validity	<i>(optional parameter)</i> How long will be the message valid. If message expires before it is received by a phone, the message will be discarded by cellular network. Acceptable parameter values: 5m, 10m, 30m, 1h, 2h, 4h, 12h, 1d, 2d, 5d, 1w, 2w, 4w, max. Default value: max
send_after	<i>(optional parameter)</i> send a message after specified time. It can be used to prevent messages from being sent at night. Format: HH:MM:SS (HH – hour, MM – minute, SS – second)
send_before	<i>(optional parameter)</i> send a message before specified time. It can be used to prevent messages from being sent at night. Format: HH:MM:SS (HH – hour, MM – minute, SS – second)

#### EXAMPLES:

```
https://url-of-smseagle/http_api/send_tocontact?
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&contactname=johndoe&message=
ymessage
```

```
https://url-of-smseagle/http_api/send_tocontact?
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&contactname=johndoe&message=
ymessage&date=201401152132
```

```
https://url-of-smseagle/http_api/send_tocontact?
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&contactname=johndoe&message=
ymessage&highpriority=1
```

#### RESPONSE:

Response: **OK; ID=[ID of message in outbox]**

Sample response: OK; ID=297

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when contact doesn't exist): **Invalid contact name – [contact\_name]**

Response (when wrong parameters): **Wrong parameters**

#### RESPONSE (XML):

Response:

```
<xml>
  <message_id>[ID of message in outbox]</message_id>
  <status>ok</status>
</xml>
```

Sample response:

```
<xml>
  <message_id>297</message_id>
  <status>ok</status>
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when contact doesn't exist):

```
<xml>
  <error_text>Invalid contact name – [contact_name]</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong parameters</error_text>
  <status>error</status>
</xml>
```

## 6. Send SMS to contact: JSONRPC method

### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
contactname	contact name defined in your SMSEagle Phonebook. The contact must be defined as Public
message	your SMS message
date	<i>(optional parameter)</i> date and time in format YYYYmmDDHHMM (YYYY – year, mm – month, DD – day, HH – hour, MM – minute). If this parameter is not null SMS will be scheduled for sending at the given date and time
highpriority	<i>(optional parameter)</i> 0 = normal priority, 1 = SMS will have higher priority in Outbox queue when processed by GSM-modem
unicode	<i>(optional parameter)</i> 0 = no Unicode encoding (default), 1 = SMS will be encoded using Unicode (you can send national characters)

flash	<i>(optional parameter)</i> 0 = normal SMS (default), 1 = SMS will be sent as flash message
modem_no	<i>(optional parameter)</i> sending modem number (only for multimodem devices)
responsetype	<i>(optional parameter)</i> simple = format response as simple object with one result field (default), extended = format response as extended JSON object
validity	<i>(optional parameter)</i> How long will be the message valid. If message expires before it is received by a phone, the message will be discarded by cellular network. Acceptable parameter values: 5m, 10m, 30m, 1h, 2h, 4h, 12h, 1d, 2d, 5d, 1w, 2w, 4w, max. Default value: max
send_after	<i>(optional parameter)</i> send a message after specified time. It can be used to prevent messages from being sent at night. Format: HH:MM:SS (HH – hour, MM – minute, SS – second)
send_before	<i>(optional parameter)</i> send a message before specified time. It can be used to prevent messages from being sent at night. Format: HH:MM:SS (HH – hour, MM – minute, SS – second)

#### EXAMPLES:

```

{"method": "sms.send_tocontact",
 "params": {"access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "contactname": "johndoe", "message": "mymessage"}}
or
{"method": "sms.send_tocontact",
 "params": {"access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "contactname": "johndoe", "message": "mymessage", "date": "201401152132"}}
or
{"method": "sms.send_tocontact",
 "params": {"access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "contactname": "johndoe", "message": "mymessage", "highpriority": "1"}}

```

#### RESPONSE:

Response: {"result": "OK; ID=[ID of message in outbox]"}

Sample response: {"result": "OK; ID=[297]"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when contact doesn't exist): {"result": "Invalid contact name - contact\_name]"}

Response (when wrong parameters): {"result": "Wrong parameters"}

#### RESPONSE (EXTENDED):

Response:

```

{"result": {"message_id": "[ID of message in outbox]", "status": "ok"}}

```

Sample response: {"result": {"message\_id": "748", "status": "ok"}}

Response (when wrong logindata):

```
{"result": {"error_text": "Invalid login or password", "status": "error"}}
```

Response (when wrong access token):

```
{"result": {"error_text": "Invalid access token", "status": "error"}}
```

Response (when contact doesn't exist):

```
{"result": {"error_text": "Invalid contact name - contact_name", "status": "error"}}
```

Response (when wrong parameters):

```
{"result": {"error_text": "Wrong parameters", "status": "error"}}
```

## 7. Send USSD code: HTTP GET method

HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/send\\_ussd](https://url-of-smseagle/http_api/send_ussd)

Parameters:

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
to	USSD code (urlencoded)
modem_no	<i>(optional parameter)</i> sending modem number (only for multimodem devices)
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

EXAMPLES:

```
https://url-of-smseagle/http_api/send_ussd?  
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&to=%2A101%23
```

RESPONSE:

Response: **OK; ID=[ID of message in outbox]**

Sample response: OK; ID=297

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters): **Wrong parameters**

RESPONSE (XML):

Response:

```
<xml>
  <message_id>[ID of message in outbox]</message_id>
  <status>ok</status>
</xml>
```

Sample response:

```
<xml>
  <message_id>297</message_id>
  <status>ok</status>
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong parameters</error_text>
  <status>error</status>
</xml>
```

*Important notice: You must urlencode USSD code before sending it to gateway. Response from GSM/3G network will show up in device Inbox folder.*

## 8. Send USSD code: JSONRPC method

HTTP POST METHOD:

`https://url-of-smseagle/jsonrpc/sms`

Parameters:

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle

to	USSD code
modem_no	<i>(optional parameter)</i> sending modem number (only for multimodem devices)
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

#### SAMPLE BODY:

```
{ "method": "sms.send_ussd",
  "params": { "access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "to": "*101#" } }
```

#### RESPONSE:

Response: {"result": "OK; ID=[ID of message in outbox]"}

Sample response: {"result": "OK; ID=297"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters): {"result": "Wrong parameters"}

#### RESPONSE (EXTENDED):

Response:

```
{ "result": { "message_id": "[ID of message in outbox]", "status": "ok" } }
```

Sample response: {"result": { "message\_id": "748", "status": "ok" } }

Response (when wrong logindata):

```
{ "result": { "error_text": "Invalid login or password", "status": "error" } }
```

Response (when wrong access token):

```
{ "result": { "error_text": "Invalid access token", "status": "error" } }
```

Response (when wrong parameters):

```
{ "result": { "error_text": "Wrong parameters", "status": "error" } }
```

*Important notice: Response from GSM/3G network will show up in device Inbox folder.*

## 9. Send binary SMS: HTTP GET method

#### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/send\\_binary\\_sms](https://url-of-smseagle/http_api/send_binary_sms)

#### PARAMETERS:

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle

to	recipient telephone number (or numbers separated with comma)
udh	<i>(optional parameter)</i> UDH header for the message (in hex format)
data	binary message (in hex format)
class	<i>(optional parameter)</i> message class
modem_no	<i>(optional parameter)</i> sending modem number (only for multimodem devices)
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

#### EXAMPLES:

```
https://url-of-smseagle/http_api/send_binary_sms?
access_token=0005gOjCOlMH8F2BPo8mWqcGzycVHRLq&to=1234567&udh=0605040B8423F0
&data=EA0601AE02056A0045C60C03777777E736D736561676C652E657500080103534D534
561676C65000101
```

#### RESPONSE:

Response: **OK; ID=[ID of message in outbox]**

Sample response: OK; ID=297

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters): **Wrong or missing >>udh<< parameter**

Response (when wrong parameters): **Wrong or missing >>data<< parameter**

#### RESPONSE (XML):

Response:

```
<xml>
  <message_id>[ID of message in outbox]</message_id>
  <status>ok</status>
</xml>
```

Sample response:

```
<xml>
  <message_id>297</message_id>
  <status>ok</status>
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text> Wrong or missing >>udh<< parameter </error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text> Wrong or missing >>data<< parameter </error_text>
  <status>error</status>
</xml>
```

## 10. Send binary SMS: JSONRPC method

### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

### PARAMETERS:

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
to	recipient telephone number (or numbers separated with comma)
udh	<i>(optional parameter)</i> UDH header for the message (in hex format)
data	binary message (in hex format)
class	<i>(optional parameter)</i> message class
modem_no	<i>(optional parameter)</i> sending modem number (only for multimodem devices)
responsetype	<i>(optional parameter)</i> simple = format response as simple object with one result field (default), extended = format response as extended JSON object

### EXAMPLES:

```
{ "method": "sms.send_binary_sms",
  "params": { "access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "to": "1234567",
    "udh": "0605040B8423F0", "data": "EA0601AE02056A0045C60C037777772E736D736561676C652E657500080103534D534561676C65000101" } }
```

## RESPONSE:

Response: {"result": "OK; ID=[ID of message in outbox]"}

Sample response: {"result": "OK; ID=297"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters): {"result": "Wrong or missing >>udh<< parameter"}

Response (when wrong parameters): {"result": "Wrong or missing >>data<< parameter"}

## RESPONSE (EXTENDED):

Response:

```
{"result": {"message_id":"[ID of message in outbox]","status":"ok"}}
```

Sample response: {"result": {"message\_id":"748","status":"ok"}}

Response (when wrong logindata):

```
{"result": {"error_text":"Invalid login or password","status":"error"}}
```

Response (when wrong access token):

```
{"result": {"error_text":"Invalid access token","status":"error"}}
```

Response (when wrong parameters):

```
{"result": {"error_text":"Wrong or missing >>udh<< parameter",  
"status":"error"}}
```

Response (when wrong parameters):

```
{"result": {"error_text":"Wrong or missing >>data<< parameter",  
"status":"error"}}
```

## 11. Read SMS: HTTP GET method

### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/read\\_sms](https://url-of-smseagle/http_api/read_sms)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
folder	one of the following: inbox, outbox, sentitems
idfrom	<i>(optional parameter)</i> minimal message-id
idto	<i>(optional parameter)</i> maximum message-id
from	<i>(optional parameter)</i> telephone number of SMS sender (for inbox)
to	<i>(optional parameter)</i> telephone number of SMS receiver (for sentitems)

datefrom	<i>(optional parameter)</i> date and time in format YYYYmmDDHHMMSS (YYYY – year, mm – month, DD – day, HH – hour, MM – minutes, SS – seconds). Show only messages sent/received on this date/time and later
dateto	<i>(optional parameter)</i> date and time in format YYYYmmDDHHMMSS (YYYY – year, mm – month, DD – day, HH – hour, MM – minutes, SS – seconds). Show only messages sent/received on this date/time and earlier
limit	<i>(optional parameter)</i> how many messages to show
unread	<i>(optional parameter)</i> 1 = show only unread messages
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object
createdby	<i>(optional parameter)</i> username or email (if message was sent via Email to SMS) of sending user
modem_no	<i>(optional parameter)</i> sending modem number (only for multimodem devices)

#### EXAMPLES:

Show all messages from inbox:

```
https://url-of-smseagle/http_api/read_sms?
access_token=0005gOjCOlMH8F2BPo8mWqcGzycVHRLq&folder=inbox
```

Show all unread messages from inbox:

```
https://url-of-smseagle/http_api/read_sms?
access_token=0005gOjCOlMH8F2BPo8mWqcGzycVHRLq&folder=inbox&unread=1
```

Show messages from sentitems folder with id=1234 to 1236:

```
https://url-of-smseagle/http_api/read_sms?
access_token=0005gOjCOlMH8F2BPo8mWqcGzycVHRLq&folder=sentitems&idfrom=1234&
idto=1236
```

Show messages from inbox folder with sender phone number +481234567:

```
https://url-of-smseagle/http_api/read_sms?
access_token=0005gOjCOlMH8F2BPo8mWqcGzycVHRLq&folder=inbox&from=+481234567
```

Show messages from sentitems folder with receiver phone number 7654321 and datetime from 2014-12-24 08:10:00 to 2014-12-31 23:59:59:

```
https://url-of-smseagle/http_api/read_sms?
access_token=0005gOjCOlMH8F2BPo8mWqcGzycVHRLq&folder=sentitems&to=7654321&d
atefrom=20141224081000&dateto=20141231235959
```

#### RESPONSE:

Sample responses: [inbox folder](#), [sentitems folder](#)

Response (when no data): **No data to display**

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters): **Wrong parameters**

## RESPONSE (XML):

### Sample response (inbox folder):

#### FIELD DESCRIPTION OF RESPONSE DATA – INBOX FOLDER:

Field	Data type	Description
UpdatedInDB	timestamp	when somebody (software, user) updated the message content or state
ReceivingDateTime	timestamp	when SMS was received
Text	text	SMS text encoded using hex values
SenderNumber	character varying(30)	SMS sender number
Coding	character varying(255)	SMS text coding. Possible values: <i>'Default_No_Compression', 'Unicode_No_Compression', '8bit', 'Default_Compression', 'Unicode_Compression'</i>
UDH	text	User Data Header encoded using hex values
SMSCNumber	character varying(20)	SMSC number
Class	integer	SMS class (0 is flash SMS, -1 is normal SMS, 127 is USSD)
TextDecoded	text	decoded SMS text
ID	serial	SMS unique identification number
RecipientID	text	which modem received the message <i>(for example: smseagle1, smseagle2)</i>
Processed	boolean	whether SMS was processed by SMSEagle application
id_folder	integer	identification of storage folder. Possible values: <i>1 Inbox</i> <i>5 Trash</i> <i>11... Custom folder</i>
readed	text	whether SMS was read in GUI or via API
oid	character varying(36)	user-defined unique ID that is assigned to a message-recipient pair. The oid uniquely identifies a message sent to a particular recipient (particular phone number). <i>More information: see send_sms method description</i>
Status	integer	Status of incoming message. Currently only used for USSD messages with following meaning: <i>1 Unknown status.</i> <i>2 No action is needed, maybe network initiated USSD.</i> <i>3 Reply is expected.</i> <i>4 USSD dialog terminated.</i>

- 5 *Another client replied.*
- 6 *Operation not supported.*
- 7 *Network timeout.*

FIELD DESCRIPTION OF RESPONSE DATA – SENTITEMS FOLDER:

Field	Data type	Description
UpdatedInDB	timestamp	when somebody (software, user) updated the message content or state
InsertIntoDB	timestamp	when message was inserted into database
SendingDateTime	timestamp	when message has been sent
DeliveryDateTime	timestamp	time of receiving a delivery report (if it has been enabled). Null if delivery report was not received.
Text	text	SMS text encoded using hex values
DestinationNumber	character varying(30)	destination number for SMS
Coding	character varying(255)	SMS text coding. Possible values: <i>'Default_No_Compression', 'Unicode_No_Compression', '8bit', 'Default_Compression', 'Unicode_Compression'</i>
UDH	text	User Data Header encoded using hex values
SMSCNumber	character varying(20)	number of SMSC, which sent SMS
Class	integer	SMS class (0 is flash SMS, -1 is normal SMS, 127 is USSD)
TextDecoded	text	decoded SMS text
ID	serial	SMS unique identification number
SenderID	character varying(255)	which modem sent the message <i>(for example: smseagle1, smseagle2)</i>
SequencePosition	integer	SMS number in SMS sequence
Status	character varying(255)	Status of message sending. Possible values: <i>SendingOK</i> <i>Message has been sent, waiting for delivery report</i> <i>SendingOKNoReport</i> <i>Message has been sent without asking for delivery report</i> <i>SendingError</i> <i>Sending has failed</i> <i>DeliveryOK</i> <i>Delivery report arrived and reported success</i> <i>DeliveryFailed</i> <i>Delivery report arrived and reports failure</i> <i>DeliveryPending</i> <i>Delivery report announced pending deliver</i> <i>DeliveryUnknown</i> <i>Delivery report reported unknown status</i> <i>Error</i>

		<i>Some other error happened during sending</i>
		<i>Notice: some cellular operators return "SendingOK" status instead of "DeliveryOK" for correctly delivered SMS. If you want to check for delivery status, please verify what you receive from your operator or instead use the field DeliveryDateTime.</i>
StatusError	integer	Status of delivery from delivery report message, codes are defined in GSM specification 03.40 section 9.2.3.15 (TP-Status)
TPMR	integer	The Message Reference field (TP-MR) as defined in GSM 03.40
RelativeValidity	integer	SMS relative validity (TP-VP) encoded as defined in GSM 03.40
CreatorID	text	username that created the SMS message
id_folder	integer	identification of storage folder. Possible values: 3 Sent items 5 Trash 11... Custom folder
StatusCode	integer	CMS status code (also known as CMS ERROR) received from cellular network. - 1 No CMS Error > -1 CMS Error occurred. CMS error number is saved in this field.

## 12. Read SMS: JSONRPC method

### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
folder	one of the following: inbox, outbox, sentitems
idfrom	<i>(optional parameter)</i> minimal message-id
idto	<i>(optional parameter)</i> maximum message-id
from	<i>(optional parameter)</i> telephone number of SMS sender (for inbox)
to	<i>(optional parameter)</i> telephone number of SMS receiver (for sentitems)
datefrom	<i>(optional parameter)</i> date and time in format YYYYmmDDHHMMSS (YYYY – year, mm – month, DD – day, HH – hour, MM – minutes, SS – seconds). Show only messages sent/received on this date/time and later

dateto	<i>(optional parameter)</i> date and time in format YYYYmmDDHHMMSS (YYYY – year, mm – month, DD – day, HH – hour, MM – minutes, SS – seconds). Show only messages sent/received on this date/time and earlier
limit	<i>(optional parameter)</i> how many messages to show
unread	<i>(optional parameter)</i> 1 = show only unread messages
responsetype	<i>(optional parameter)</i> simple = format response as simple object with one result field (default), extended = format response as extended JSON object
createdby	<i>(optional parameter)</i> username or email (if message was sent via Email to SMS) of sending user
modem_no	<i>(optional parameter)</i> sending modem number (only for multimodem devices)

### EXAMPLES:

Show all messages from inbox:

```
{ "method": "sms.read_sms",
  "params": { "access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "folder": "inbox"
} }
```

Show all unread messages from inbox:

```
{ "method": "sms.read_sms",
  "params": { "access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "folder": "inbox", "unread": "1"
} }
```

Show messages from sentitems folder with id=1234 to 1236:

```
{ "method": "sms.read_sms",
  "params": { "access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "folder": "sentitems", "idfrom": "1234", "idto": "1236"
} }
```

Show messages from inbox folder with sender phone number +481234567:

```
{ "method": "sms.read_sms",
  "params": { "access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "folder": "inbox", "from": "+481234567"
} }
```

Show messages from sentitems folder with receiver phone number 7654321 and datetime from 2014-12-24 08:10:00 to 2014-12-31 23:59:59:

```
{ "method": "sms.read_sms",
  "params": { "access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "folder": "sentitems", "to": "7654321", "datefrom": "20141224081000", "dateto": "20141231235959"
} }
```

### RESPONSE:

#### FIELD DESCRIPTION OF RESPONSE DATA – INBOX FOLDER:

Field	Data type	Description
UpdatedInDB	timestamp	when somebody (software, user) updated the message content or state
ReceivingDateTime	timestamp	when SMS was received
Text	text	SMS text encoded using hex values
SenderNumber	character varying(30)	SMS sender number
Coding	character varying(255)	SMS text coding. Possible values: 'Default_No_Compression', 'Unicode_No_Compression', '8bit', 'Default_Compression', 'Unicode_Compression'
UDH	text	User Data Header encoded using hex values
SMSCNumber	character varying(20)	SMSC number
Class	integer	SMS class (0 is flash SMS, -1 is normal SMS, 127 is USSD)
TextDecoded	text	decoded SMS text
ID	serial	SMS unique identification number
RecipientID	text	which modem received the message (for example: smseagle1, smseagle2)
Processed	boolean	whether SMS was processed by SMSEagle application
id_folder	integer	identification of storage folder. Possible values: 1 Inbox

		5 <i>Trash</i> 11... <i>Custom folder</i>
readed	text	whether SMS was read in GUI or via API
oid	character varying(36)	user-defined unique ID that is assigned to a message-recipient pair. The oid uniquely identifies a message sent to a particular recipient (particular phone number). <i>More information: see send_sms method description</i>
Status	integer	Status of incoming message. Currently only used for USSD messages with following meaning: 1 <i>Unknown status.</i> 2 <i>No action is needed, maybe network initiated USSD.</i> 3 <i>Reply is expected.</i> 4 <i>USSD dialog terminated.</i> 5 <i>Another client replied.</i> 6 <i>Operation not supported.</i> 7 <i>Network timeout.</i>

#### FIELD DESCRIPTION OF RESPONSE DATA – SENTITEMS FOLDER:

Field	Data type	Description
UpdatedInDB	timestamp	when somebody (software, user) updated the message content or state
InsertIntoDB	timestamp	when message was inserted into database
SendingDateTime	timestamp	when message has been sent
DeliveryDateTime	timestamp	time of receiving a delivery report (if it has been enabled). Null if delivery report was not received.
Text	text	SMS text encoded using hex values
DestinationNumber	character varying(30)	destination number for SMS
Coding	character varying(255)	SMS text coding. Possible values: <i>'Default_No_Compression', 'Unicode_No_Compression', '8bit', 'Default_Compression', 'Unicode_Compression'</i>
UDH	text	User Data Header encoded using hex values
SMSCNumber	character varying(20)	number of SMSC, which sent SMS
Class	integer	SMS class (0 is flash SMS, -1 is normal SMS, 127 is USSD)
TextDecoded	text	decoded SMS text
ID	serial	SMS unique identification number
SenderId	character varying(255)	which modem sent the message <i>(for example: smseagle1, smseagle2)</i>
SequencePosition	integer	SMS number in SMS sequence
Status	character varying(255)	Status of message sending. Possible values: <i>SendingOK</i> <i>Message has been sent, waiting for delivery report</i>

		<p><i>SendingOKNoReport</i>  <i>Message has been sent without asking for delivery report</i></p> <p><i>SendingError</i>  <i>Sending has failed</i></p> <p><i>DeliveryOK</i>  <i>Delivery report arrived and reported success</i></p> <p><i>DeliveryFailed</i>  <i>Delivery report arrived and reports failure</i></p> <p><i>DeliveryPending</i>  <i>Delivery report announced pending deliver</i></p> <p><i>DeliveryUnknown</i>  <i>Delivery report reported unknown status</i></p> <p><i>Error</i>  <i>Some other error happened during sending</i></p> <p><i>Notice: some cellular operators return "SendingOK" status instead of "DeliveryOK" for correctly delivered SMS. If you want to check for delivery status, please verify what values you receive from your operator or instead use the field DeliveryDateTime.</i></p>
StatusError	integer	Status of delivery from delivery report message, codes are defined in GSM specification 03.40 section 9.2.3.15 (TP-Status)
TPMR	integer	The Message Reference field (TP-MR) as defined in GSM 03.40
RelativeValidity	integer	SMS relative validity (TP-VP) encoded as defined in GSM 03.40
CreatorID	text	username that created the SMS message
id_folder	integer	identification of storage folder. Possible values: 3 <i>Sent items</i> 5 <i>Trash</i> 11... <i>Custom folder</i>
StatusCode	integer	CMS status code (also known as CMS ERROR) received from cellular network. - 1 <i>No CMS Error</i> > -1 <i>CMS Error occurred. CMS error number is saved in this field.</i>

### 13. Delete SMS: HTTP GET method

#### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/delete\\_sms](https://url-of-smseagle/http_api/delete_sms)

Parameter	Description
-----------	-------------

access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
folder	one of the following: inbox, outbox, sentitems
idfrom	minimal id of message
idto	maximal id of message
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

#### EXAMPLES:

Delete message with id=1234 from inbox:

```
https://url-of-smseagle/http_api/delete_sms?
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&folder=inbox&idfrom=1234&idto=1234
```

Delete messages with id 1234 - 1250 from inbox:

```
https://url-of-smseagle/http_api/delete_sms?
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&folder=inbox&idfrom=1234&idto=1250
```

Delete all messages from outbox:

```
https://url-of-smseagle/http_api/delete_sms?
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&folder=outbox&idfrom=1&idto=99999999
```

#### RESPONSE:

Response: **OK**

Response (when delete operation was not successful): **Error**

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

#### RESPONSE (XML):

Response:

```
<xml>
  <status>ok</status>
</xml>
```

Response (when delete operation was not successful):

```
<xml>
  <status>error</status>
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

## 14. Delete SMS: JSONRPC method

### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
folder	one of the following: inbox, outbox, sentitems
idfrom	minimal id of message
idto	maximal id of message
responsetype	<i>(optional parameter)</i> simple = format response as simple object with one result field (default), extended = format response as extended JSON object

### EXAMPLES:

Delete message with id=1234 from inbox:

```
{"method": "sms.delete_sms",
"params": {"access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "folder": "inbox", "idfrom": "1234", "idto": "1234"}}
```

Delete messages with id 1234 - 1250 from inbox:

```
{"method": "sms.delete_sms",
"params": {"access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "folder": "inbox", "idfrom": "1234", "idto": "1250"}}
```

Delete all messages from outbox:

```
{"method": "sms.delete_sms",
"params": {"access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "folder": "outbox", "idfrom": "1", "idto": "999999999"}}
```

### RESPONSE:

Response: {"result": "OK"}

Response (when delete operation was not successful): {"result": "Error"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

### RESPONSE (EXTENDED):

Response: {"result": {"status": "ok"}}

Response (when delete operation was not successful):

```
{"result": {"status": "error"}}
```

Response (when wrong logindata):

```
{"result": {"error_text": "Invalid login or password", "status": "error"}}
```

Response (when wrong access token):

```
{"result": {"error_text": "Invalid access token", "status": "error"}}
```

## 15. Get outgoing queue length: HTTP GET method

### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/get\\_queue\\_length](https://url-of-smseagle/http_api/get_queue_length)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

### EXAMPLES:

```
https://url-of-smseagle/http_api/get_queue_length?  
access_token=0005gOjCOlMH8F2BPo8mWqcGzycVHRLq
```

### RESPONSE:

Response: **[number of messages in database that wait to be processed by GSM-modem]**

Sample response: 7

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters): **Wrong parameters**

### RESPONSE (XML):

Response:

```
<xml>  
  <queue_length>  
    [number of messages in database that wait to be processed by GSM-modem]  
  </queue_length >  
  <status>ok</status>  
</xml>
```

Sample response:

```
<xml>  
  <queue_length>7</queue_length >  
  <status>ok</status>  
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong parameters</error_text>
  <status>error</status>
</xml>
```

## 16. Get outgoing queue length: JSONRPC method

### HTTP POST METHOD CALL:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
responsetype	<i>(optional parameter)</i> simple = format response as simple object with one result field (default), extended = format response as extended JSON object

### BODY:

```
{ "method": "sms.get_queue_length",
  "params": { "access_token": "0005gOjCO1MH8F2BPo8mWqcGzycVHRLq" } }
```

### RESPONSE:

Response: {"result": [number of messages in database that wait to be processed by GSM-modem]}

Sample response: {"result": 7}

Response: {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response: {"result": "Wrong parameters"}

### RESPONSE (EXTENDED):

Response:

```
{"result":{"queue_length":[number of messages in database that wait to be processed by GSM-modem],"status":"ok"}}
```

Sample response: {"result": {"queue\_length":"419","status":"ok"}}

Response (when wrong logindata):

```
{"result": {"error_text":"Invalid login or password","status":"error"}}
```

Response (when wrong access token):

```
{"result": {"error_text":"Invalid access token","status":"error"}}
```

Response (when wrong parameters):

```
{"result": {"error_text":"Wrong parameters","status":"error"}}
```

## 17. Get inbox length: HTTP GET method

### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/get\\_inbox\\_length](https://url-of-smseagle/http_api/get_inbox_length)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

### EXAMPLES:

```
https://url-of-smseagle/http_api/get_inbox_length?  
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq
```

### RESPONSE:

Response: **[number of messages in database Inbox folder]**

Sample response: 3

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters): **Wrong parameters**

### RESPONSE (XML):

Response:

```
<xml>  
  <queue_length>  
    [number of messages in database Inbox folder]  
  </queue_length>  
  <status>ok</status>  
</xml>
```

Sample response:

```
<xml>
  <inbox_length>3</inbox_length>
  <status>ok</status>
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong parameters</error_text>
  <status>error</status>
</xml>
```

## 18. Get inbox length: JSONRPC method

### HTTP POST METHOD:

`https://url-of-smseagle/jsonrpc/sms`

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
responsetype	<i>(optional parameter)</i> simple = format response as simple object with one result field (default), extended = format response as extended JSON object

### EXAMPLES:

```
{ "method": "sms.get_inbox_length",
  "params": { "access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq" } }
```

### RESPONSE:

```
Response: { "result": "[number of messages in database Inbox folder]" }
```

Sample response: 3

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters): {"result": "Wrong parameters"}

#### RESPONSE (EXTENDED):

Response:

```
{"result":{"inbox_length":[number of messages in database Inbox folder],"status":"ok"}}
```

Sample response: {"result": {"inbox\_length":"3","status":"ok"}}

Response (when wrong logindata):

```
{"result": {"error_text":"Invalid login or password","status":"error"}}
```

Response (when wrong access token):

```
{"result": {"error_text":"Invalid access token","status":"error"}}
```

Response (when wrong parameters):

```
{"result": {"error_text":"Wrong parameters","status":"error"}}
```

## 19. Get sentitems length: HTTP GET method

#### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/get\\_inbox\\_length](https://url-of-smseagle/http_api/get_inbox_length)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

#### EXAMPLES:

[https://url-of-smseagle/http\\_api/get\\_sentitems\\_length?access\\_token=0005gOjCOlMH8F2BPo8mWqcGzycVHRLq](https://url-of-smseagle/http_api/get_sentitems_length?access_token=0005gOjCOlMH8F2BPo8mWqcGzycVHRLq)

#### RESPONSE:

Response: **[number of messages in database Sentitems folder]**

Sample response: 21

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters): **Wrong parameters**

## RESPONSE (XML):

Response:

```
<xml>
  <sentitems_length>
    [number of messages in database Inbox folder]
  </sentitems_length>
  <status>ok</status>
</xml>
```

Sample response:

```
<xml>
  <sentitems_length>21</sentitems_length>
  <status>ok</status>
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong parameters</error_text>
  <status>error</status>
</xml>
```

## 20. Get sentitems length: JSONRPC method

### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
responsetype	<i>(optional parameter)</i> simple = format response as simple object with one result field (default), extended = format response as extended JSON object

#### EXAMPLES:

```
{"method":"sms.get_sentitems_length",  
"params":{"access_token":"0005gOjCO1MH8F2BPo8mWqcGzycVHRLq"}}
```

#### RESPONSE:

Response: {"result": "[number of messages in database Sentitems folder]"}  
Sample response: {"result": "21"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters): {"result": "Wrong parameters"}

#### RESPONSE (EXTENDED):

Response:

```
{"result":{"sentitems_length":[number of messages in database Sentitems  
folder],"status":"ok"}}
```

Sample response: {"result": {"sentitems\_length":"21","status":"ok"}}

Response (when wrong logindata):

```
{"result": {"error_text":"Invalid login or password","status":"error"}}
```

Response (when wrong access token):

```
{"result": {"error_text":"Invalid access token","status":"error"}}
```

Response (when wrong parameters):

```
{"result": {"error_text":"Wrong parameters","status":"error"}}
```

## 21. Get GSM/3G signal strength: HTTP GET method

#### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/get\\_gsmsignal](https://url-of-smseagle/http_api/get_gsmsignal)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
modem_no	<i>(optional parameter)</i> modem number to be queried (default = 1). Used only in multimodem devices
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

#### EXAMPLES:

```
https://url-of-smseagle/http_api/get_gsmsignal?  
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&modem_no=1
```

#### RESPONSE:

Response: **GSM/3G signal strength in percent (values between 0-100)**. If 3G modem is disconnected from GSM/3G network, method returns -1

Sample response: 74

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters): **Wrong parameters**

#### RESPONSE (XML):

Response:

```
<xml>
  <signal_strength>
    [GSM signal strength in percent (values between 0-100)]
  </signal_strength>
  <status>ok</status>
</xml>
```

Sample response:

```
<xml>
  <signal_strength>74</signal_strength>
  <status>ok</status>
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong parameters</error_text>
  <status>error</status>
</xml>
```

## 22. Get GSM/3G signal strength: JSONRPC method

### HTTP POST METHOD CALL:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
modem_no	<i>(optional parameter)</i> modem number to be queried (default = 1). Used only in multimodem devices
responsetype	<i>(optional parameter)</i> simple = format response as simple object with one result field (default), extended = format response as extended JSON object

### BODY:

```
{"method": "signal.get_gsm_signal",  
"params": {"access_token": "0005gOjCO1MH8F2BPo8mWqcGzycVHRLq"}}
```

### RESPONSE:

Response: {"result": GSM/3G signal strength in percent: values between 0-100. If 3G modem is disconnected from GSM/3G network, method returns -1 }

Sample response: {"result": 7}

Response: {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response: {"result": "Wrong parameters"}

### RESPONSE (EXTENDED):

Response:

```
{"result": {"signal_strength": [number of messages in database Sentitems folder], "status": "ok"}}
```

Sample response: {"result": {"signal\_strength": "7", "status": "ok"}}

Response (when wrong logindata):

```
{"result": {"error_text": "Invalid login or password", "status": "error"}}
```

Response (when wrong access token):

```
{"result": {"error_text": "Invalid access token", "status": "error"}}
```

## 23. Phonebook group create: HTTP GET method

### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/group\\_create](https://url-of-smseagle/http_api/group_create)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
groupname	name for the created group
public	<i>(optional parameter)</i> 0 = private group, 1 = public group
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

### EXAMPLES:

[https://url-of-smseagle/http\\_api/group\\_create?  
access\\_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&groupname=myusers&public=1](https://url-of-smseagle/http_api/group_create?access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&groupname=myusers&public=1)

### RESPONSE:

Response: **OK; ID=[ID of created group]**

Sample response: OK; ID=5

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters): **Wrong or missing >>groupname<< parameter**

### RESPONSE (XML):

Response:

```
<xml>  
  <group_id>[ID of created group]</group_id>  
  <status>ok</status>  
</xml>
```

Sample response:

```
<xml>  
  <group_id>5</group_id>  
  <status>ok</status>  
</xml>
```

Response (when wrong logindata):

```
<xml>  
  <error_text>Invalid login or password</error_text>  
  <status>error</status>  
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong or missing >>groupname<< parameter</error_text>
  <status>error</status>
</xml>
```

## 24. Phonebook group create: JSONRPC method

### HTTP POST METHOD:

`https://url-of-smseagle/jsonrpc/sms`

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
groupname	name for the created group
public	<i>(optional parameter)</i> 0 = private group, 1 = public group
responsetype	<i>(optional parameter)</i> simple = format response as simple object with one result field (default), extended = format response as extended JSON object

### EXAMPLES:

```
{ "method": "phonebook.group_create",
  "params": { "access_token": "0005gOjCO1MH8F2BPo8mWqcGzycVHRLq", "groupname": "my users", "public": "1" } }
```

### RESPONSE:

Response: {"result": "OK; ID=[ID of created group]"}  
Sample response: {"result": "OK; ID=5"}

Response (when wrong login data): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters): {"result": "Wrong or missing >>groupname<< parameter"}

### RESPONSE (EXTENDED):

Response:

```
{ "result": { "group_id": "[ID of created group]", "status": "ok" } }
```

Sample response: {"result": {"group\_id": "748", "status": "ok"}}

Response (when wrong logindata):

```
{"result": {"error_text": "Invalid login or password", "status": "error"}}
```

Response (when wrong access token):

```
{"result": {"error_text": "Invalid access token", "status": "error"}}
```

Response (when wrong parameters):

```
{"result": {"error_text": "Wrong parameters", "status": "error"}}
```

## 25. Phonebook group read: HTTP GET method

### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/group\\_read](https://url-of-smseagle/http_api/group_read)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
public	<i>(optional parameter)</i> 0 = private group (default value), 1 = public group
uid	<i>(optional parameter)</i> id of user who created the group
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

### EXAMPLES:

```
https://url-of-smseagle/http_api/group_read?  
access_token=0005gOjCOlMH8F2BPo8mWqcGzycVHRLq&public=1&uid=12
```

### RESPONSE:

Sample response: [link](#)

Response (when no data): **No data to display**

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters):

**Wrong or missing >>uid<< parameter**

**Wrong or missing >>public<< parameter**

### RESPONSE (XML):

Sample response:

```
<xml>  
<groups>  
<item>  
<Name>private</Name>  
<ID>2</ID>  
<id_user>2</id_user>
```

```
<is_public>true</is_public>
</item>
<item>
  <Name>Everyone</Name>
  <ID>3</ID>
  <id_user>1</id_user>
  <is_public>true</is_public>
</item>
<item>
  <Name>work</Name>
  <ID>4</ID>
  <id_user>1</id_user>
  <is_public>true</is_public>
</item></groups>
<status>ok</status>
</xml>
```

Response (when no data):

```
<xml>
  <error_text>No data to display</error_text>
  <status>error</status>
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong or missing >>uid<< parameter</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong or missing >>public<< parameter</error_text>
  <status>error</status>
</xml>
```

## 26. Phonebook group read: JSONRPC method

### HTTP POST METHOD:

https://url-of-smseagle/jsonrpc/sms

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
public	<i>(optional parameter)</i> 0 = private group (default value), 1 = public group
uid	<i>(optional parameter)</i> id of user who created the group
responsetype	<i>(optional parameter)</i> simple = format response as simple object with one result field (default), extended = format response as extended JSON object

### EXAMPLES:

```
{ "method": "phonebook.group_read",  
  "params": { "access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "public": "1", "uid": "12" } }
```

### RESPONSE:

Sample response:

```
{ "result": [  
  { "Name": "private", "ID": "2", "id_user": "1", "is_public": "true" },  
  { "Name": "Everyone", "ID": "3", "id_user": "1", "is_public": "true" },  
  { "Name": "work", "ID": "4", "id_user": "2", "is_public": "true" }  
]
```

Response (when no data): {"result": "No data to display"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters):

```
{ "result": "Wrong or missing >>uid<< parameter" }  
{ "result": "Wrong or missing >>public<< parameter" }
```

### RESPONSE (EXTENDED):

Sample response:

```
{ "result": [ { "groups": [  
  { "Name": "private", "ID": "2", "id_user": "1", "is_public": "true" },  
  { "Name": "Everyone", "ID": "3", "id_user": "1", "is_public": "true" },  
  { "Name": "work", "ID": "4", "id_user": "2", "is_public": "true" }  
], "status": "ok" } }
```

Response (when no data):

```
{ "result": { "error_text": " No data to display", "status": "error" } }
```

Response (when wrong logindata):

```
{"result": {"error_text": "Invalid login or password", "status": "error"}}
```

Response (when wrong access token):

```
{"result": {"error_text": "Invalid access token", "status": "error"}}
```

Response (when wrong parameters):

```
{"result": {"error_text": "Wrong or missing >>uid<<  
parameter", "status": "error"}}
```

```
{"result": {"error_text": "Wrong or missing >>public<<  
parameter", "status": "error"}}
```

## 27. Phonebook group update: HTTP GET method

### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/group\\_update](https://url-of-smseagle/http_api/group_update)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
group_id	id of existing group
groupname	name for the group
public	<i>(optional parameter)</i> 0 = private group, 1 = public group
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

### EXAMPLES:

```
https://url-of-smseagle/http_api/group_update?  
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&group_id=2&groupname=myusers&  
public=1
```

### RESPONSE:

Response: **OK**

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters):

**Wrong or missing >>groupname<< parameter**

**Wrong or missing >>group\_id<< parameter**

Response (when group\_id is wrong): **Group with the given id does not exists**

### RESPONSE (XML):

Response:

```
<xml>
  <status>ok</status>
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong or missing >>groupname<< parameter</error_text>
  <status>error</status>
</xml>
```

```
<xml>
  <error_text>Wrong or missing >>group_id<< parameter</error_text>
  <status>error</status>
</xml>
```

Response (when group\_id is wrong):

```
<xml>
  <error_text>Group with the given id does not exists</error_text>
  <status>error</status>
</xml>
```

## 28. Phonebook group update: JSONRPC method

### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle

group_id	id of existing group
groupname	name for the group
public	<i>(optional parameter)</i> 0 = private group, 1 = public group
responsetype	<i>(optional parameter)</i> simple = format response as simple object with one result field (default), extended = format response as extended JSON object

#### EXAMPLES:

```
{ "method": "phonebook.group_update",
  "params": { "access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "group_id": "2",
             "groupname": "myusers", "public": "1" } }
```

#### RESPONSE:

Response: { "result": "OK" }

Response (when wrong logindata): { "result": "Invalid login or password" }

Response (when wrong access token): { "result": "Invalid access token" }

Response (when wrong parameters):

```
{ "result": "Wrong or missing >>groupname<< parameter" }
```

```
{ "result": "Wrong or missing >>group_id<< parameter" }
```

Response (when group\_id is wrong): { "result": "Group with the given id does not exists" }

#### RESPONSE (EXTENDED):

Response: { "result": { "status": "ok" } }

Response (when wrong logindata):

```
{ "result": { "error_text": "Invalid login or password", "status": "error" } }
```

Response (when wrong access token):

```
{ "result": { "error_text": "Invalid access token", "status": "error" } }
```

Response (when wrong parameters):

```
{ "result": { "error_text": "Wrong or missing >>groupname<< parameter", "status": "error" } }
```

```
{ "result": { "error_text": "Wrong or missing >>group_id<< parameter", "status": "error" } }
```

Response (when group\_id is wrong):

```
{ "result": { "error_text": "Group with the given id does not exists", "status": "error" } }
```

## 29. Phonebook group delete: HTTP GET method

#### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/group\\_delete](https://url-of-smseagle/http_api/group_delete)

Parameter	Description
-----------	-------------

access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
group_id	id of existing group
groupname	name of existing group
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

#### EXAMPLES:

`https://url-of-smseagle/http_api/group_delete?access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&group_id=2&groupname=myusers`

#### RESPONSE:

Response: **OK**

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters):

**Wrong or missing >>groupname<< parameter**

**Wrong or missing >>group\_id<< parameter**

Response (when group\_id is wrong): **Group with the given id and name does not exist**

#### RESPONSE (XML):

Response:

```
<xml>
  <status>ok</status>
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong or missing >>groupname<< parameter</error_text>
  <status>error</status>
</xml>
```

```
<xml>
  <error_text>Wrong or missing >>group_id<< parameter</error_text>
  <status>error</status>
</xml>
```

Response (when group\_id is wrong):

```
<xml>
  <error_text>Group with the given id does not exists</error_text>
  <status>error</status>
</xml>
```

### 30. Phonebook group delete: JSONRPC method

#### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
group_id	id of existing group
groupname	name of existing group
responsetype	<i>(optional parameter)</i> simple = format response as simple object with one result field (default), extended = format response as extended JSON object

#### EXAMPLES:

```
{ "method": "phonebook.group_delete",
  "params": { "access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "group_id": "2",
    "groupname": "myusers" } }
```

#### RESPONSE:

Response: {"result": "OK"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters):

```
{"result": "Wrong or missing >>groupname<< parameter"}
{"result": "Wrong or missing >>group_id<< parameter"}
```

Response (when group\_id is wrong): {"result": "Group with the given id and name does not exist"}

#### RESPONSE (EXTENDED):

Response: {"result":{"status":"ok"}}

Response (when wrong logindata):

```
{"result": {"error_text":"Invalid login or password","status":"error"}}
```

Response (when wrong access token):

```
{"result": {"error_text":"Invalid access token","status":"error"}}
```

Response (when wrong parameters):

```
{"result": {"error_text":"Wrong or missing >>groupname<<  
parameter","status":"error"}}
```

```
{"result": {"error_text":"Wrong or missing >>group_id<<  
parameter","status":"error"}}
```

Response (when group\_id is wrong):

```
{"result": {"error_text":"Group with the given id does not  
exists","status":"error"}}
```

### 31. Phonebook group add contact: HTTP GET method

#### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/group\\_addcontact](https://url-of-smseagle/http_api/group_addcontact)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
group_id	id of existing group (or id's separated with comma)
contact_id	id of contact. The contact will be added to the group
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

#### EXAMPLES:

```
https://url-of-smseagle/http\_api/group\_addcontact?  
access\_token=0005gOjCOlMH8F2BPo8mWqcGzycVHRLq&group\_id=2&contact\_id=1
```

#### RESPONSE:

Response: **OK**

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters):

**Wrong or missing >>group\_id<< parameter**

**Wrong or missing >>contact\_id<< parameter**

Response (when id is wrong):

**Group with the given id does not exists**

**Contact with the given id does not exists**

**RESPONSE (XML):**

Response:

```
<xml>  
  <status>ok</status>  
</xml>
```

Response (when wrong logindata):

```
<xml>  
  <error_text>Invalid login or password</error_text>  
  <status>error</status>  
</xml>
```

Response (when wrong access token):

```
<xml>  
  <error_text>Invalid Access token</error_text>  
  <status>error</status>  
</xml>
```

Response (when wrong parameters):

```
<xml>  
  <error_text>Wrong or missing >>group_id<< parameter</error_text>  
  <status>error</status>  
</xml>
```

```
<xml>  
  <error_text>Wrong or missing >>contact_id<< parameter</error_text>  
  <status>error</status>  
</xml>
```

Response (when id is wrong):

```
<xml>  
  <error_text>Group with the given id does not exists</error_text>  
  <status>error</status>  
</xml>
```

```
<xml>  
  <error_text>Contact with the given id does not exists</error_text>  
  <status>error</status>  
</xml>
```

## 32. Phonebook group add contact: JSONRPC method

### HTTP POST METHOD:

https://url-of-smseagle/jsonrpc/sms

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
group_id	id of existing group (or id's separated with comma)
contact_id	id of contact. The contact will be added to the group
responsetype	<i>(optional parameter)</i> simple = format response as simple object with one result field (default), extended = format response as extended JSON object

### EXAMPLES:

```
{"method": "phonebook.group_addcontact",  
"params": {"access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "group_id": "2",  
"contact_id": "1"}}
```

### RESPONSE:

Response: {"result": "OK"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters):

```
{"result": "Wrong or missing >>group_id<< parameter"}
```

```
{"result": "Wrong or missing >>contact_id<< parameter"}
```

Response (when id is wrong):

```
{"result": "Group with the given id does not exists"}
```

```
{"result": "Contact with the given id does not exists"}
```

### RESPONSE (EXTENDED):

Response: {"result": {"status": "ok"}}

Response (when wrong logindata):

```
{"result": {"error_text": "Invalid login or password", "status": "error"}}
```

Response (when wrong access token):

```
{"result": {"error_text": "Invalid access token", "status": "error"}}
```

Response (when wrong parameters):

```
{"result": {"error_text": "Wrong or missing >>group_id<<  
parameter", "status": "error"}}
```

```
{"result": {"error_text": "Wrong or missing >>contact_id<<  
parameter", "status": "error"}}
```

Response (when id is wrong):

```
{"result": {"error_text": "Group with the given id does not exists", "status": "error"}}
```

```
{"result": {"error_text": "Contact with the given id does not exists", "status": "error"}}
```

### 33. Phonebook group remove contact: HTTP GET method

#### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/group\\_removecontact](https://url-of-smseagle/http_api/group_removecontact)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
group_id	id of existing group (or id's separated with comma)
contact_id	id of contact. The contact will be removed from the group
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

#### EXAMPLES:

```
https://url-of-smseagle/http_api/group_removecontact?  
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&group_id=2&contact_id=1
```

#### RESPONSE:

Response: **OK**

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters):

**Wrong or missing >>group\_id<< parameter**

**Wrong or missing >>contact\_id<< parameter**

Response (when id is wrong):

**Group with the given id does not exists**

**Contact with the given id does not exists**

#### RESPONSE (XML):

Response:

```
<xml>  
  <status>ok</status>  
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong or missing >>group_id<< parameter</error_text>
  <status>error</status>
</xml>
```

```
<xml>
  <error_text>Wrong or missing >>contact_id<< parameter</error_text>
  <status>error</status>
</xml>
```

Response (when id is wrong):

```
<xml>
  <error_text>Group with the given id does not exists</error_text>
  <status>error</status>
</xml>
```

```
<xml>
  <error_text>Contact with the given id does not exists</error_text>
  <status>error</status>
</xml>
```

## 34. Phonebook group remove contact: JSONRPC method

HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
group_id	id of existing group (or id's separated with comma)

contact_id	id of contact. The contact will be removed from the group
responsetype	<i>(optional parameter)</i> simple = format response as simple object with one result field (default), extended = format response as extended JSON object

#### EXAMPLES:

```
{ "method": "phonebook.group_removecontact",
  "params": { "access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "group_id": "2",
             "contact_id": "1" } }
```

#### RESPONSE:

Response: {"result": "OK"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters):

```
{ "result": "Wrong or missing >>group_id<< parameter" }
{ "result": "Wrong or missing >>contact_id<< parameter" }
```

Response (when id is wrong):

```
{ "result": "Group with the given id does not exists" }
{ "result": "Contact with the given id does not exists" }
```

#### RESPONSE (EXTENDED):

Response: {"result": {"status": "ok"}}

Response (when wrong logindata):

```
{ "result": { "error_text": "Invalid login or password", "status": "error" } }
```

Response (when wrong access token) :

```
{ "result": { "error_text": "Invalid access token", "status": "error" } }
```

Response (when wrong parameters):

```
{ "result": { "error_text": "Wrong or missing >>group_id<<
parameter", "status": "error" } }
```

```
{ "result": { "error_text": "Wrong or missing >>contact_id<<
parameter", "status": "error" } }
```

Response (when id is wrong):

```
{ "result": { "error_text": "Group with the given id does not
exists", "status": "error" } }
```

```
{ "result": { "error_text": "Contact with the given id does not
exists", "status": "error" } }
```

## 35. Phonebook contact create: HTTP GET method

#### HTTP GET METHOD:

https://url-of-smseagle/http\_api/contact\_create

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
contactname	name for the created contact
number	telephone number for the created contact
public	<i>(optional parameter)</i> 0 = private contact, 1 = public contact (default value)
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

#### EXAMPLES:

```
https://url-of-smseagle/http_api/contact_create?
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&contactname=johndoe&number=12
345678&public=1
```

#### RESPONSE:

Response: **OK; ID=[ID of created contact]**

Sample response: OK; ID=2

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters):

**Wrong or missing >>contactname<< parameter**

**Wrong or missing >>number<< parameter**

#### RESPONSE (XML):

Response:

```
<xml>
  <contact_id>[ID of created contact]</contact_id>
  <status>ok</status>
</xml>
```

Sample response:

```
<xml>
  <contact_id>2</contact_id>
  <status>ok</status>
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong or missing >>contactname<< parameter</error_text>
  <status>error</status>
</xml>
```

```
<xml>
  <error_text>Wrong or missing >>number<< parameter</error_text>
  <status>error</status>
</xml>
```

## 36. Phonebook contact create: JSONRPC method

### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
contactname	name for the created contact
number	telephone number for the created contact
public	<i>(optional parameter)</i> 0 = private contact 1 = public contact (default value)
responsetype	<i>(optional parameter)</i> simple = format response as simple object with one result field (default), extended = format response as extended JSON object

### EXAMPLES:

```
{ "method": "phonebook.contact_create",
  "params": { "access_token": "0005gOjCOlMH8F2BPO8mWqcGzycVHRLq", "contactname": "
johndoe", "number": "12345678", "public": "1" } }
```

### RESPONSE:

Response: {"result": "OK; ID=[ID of created contact]"}

Sample response: {"result": "OK; ID=2"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters):

```
{"result": "Wrong or missing >>contactname<< parameter"}  
{"result": "Wrong or missing >>number<< parameter"}
```

#### RESPONSE (EXTENDED):

Response:

```
{"result": {"contact_id":"[ID of created contact]","status":"ok"}}
```

Sample response: {"result": {"contact\_id":"2","status":"ok"}}

Response (when wrong logindata):

```
{"result": {"error_text":"Invalid login or password","status":"error"}}
```

Response (when wrong access token):

```
{"result": {"error_text":"Invalid access token","status":"error"}}
```

Response (when wrong parameters):

```
{"result": {"error_text":"Wrong or missing >>contactname<<  
parameter"},"status":"error"}}
```

```
{"result": {"error_text":"Wrong or missing >>number<<  
parameter"},"status":"error"}}
```

## 37. Phonebook contact read: HTTP GET method

#### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/contact\\_read](https://url-of-smseagle/http_api/contact_read)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
public	<i>(optional parameter)</i> 0 = private contacts (default value), 1 = public contacts
uid	<i>(optional parameter)</i> id of user who created the contact
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

#### EXAMPLES:

```
https://url-of-smseagle/http\_api/contact\_read?  
access\_token=0005gOjCOlMH8F2BPo8mWqcGzycVHRLq&public=1&uid=12
```

#### RESPONSE:

Sample response: [link](#)

Response (when no data): **No data to display**

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters):

**Wrong or missing >>uid<< parameter**

**Wrong or missing >>public<< parameter**

#### RESPONSE (XML):

Sample response:

```
<xml>
<contacts>
  <item>
    <ID>2</ID>
    <GroupID>-1</GroupID>
    <Name>John Doe</Name>
    <Number>123123123</Number>
    <id_user>1</id_user>
    <is_public>true</is_public>
  </item>
  <item>
    <ID>4</ID>
    <GroupID>-1</GroupID>
    <Name>Jan Nowak</Name>
    <Number>4215456456</Number>
    <id_user>1</id_user>
    <is_public>true</is_public>
  </item>
  <item>
    <ID>5</ID>
    <GroupID>-1</GroupID>
    <Name>Andy</Name>
    <Number>+441234155931</Number>
    <id_user>1</id_user>
    <is_public>true</is_public>
  </item>
</contacts>
<status>ok</status>
</xml>
```

Response (when no data):

```
<xml>
  <error_text>No data to display</error_text>
  <status>error</status>
</xml>
```

Response (when wrong logindata):

```
<xml>
```

```

    <error_text>Invalid login or password</error_text>
    <status>error</status>
</xml>

```

Response (when wrong access token):

```

<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>

```

Response (when wrong parameters):

```

<xml>
  <error_text>Wrong or missing >>uid<< parameter</error_text>
  <status>error</status>
</xml>

```

```

<xml>
  <error_text>Wrong or missing >>public<< parameter</error_text>
  <status>error</status>
</xml>

```

## 38. Phonebook contact read: JSONRPC method

### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
public	<i>(optional parameter)</i> 0 = private contacts (default value), 1 = public contacts
uid	<i>(optional parameter)</i> id of user who created the contact
responsetype	<i>(optional parameter)</i> simple = format response as simple object with one result field (default), extended = format response as extended JSON object

### EXAMPLES:

```

{"method": "phonebook.contact_read",
 "params": {"access_token": "0005gOjCO1MH8F2BPo8mWqcGzycVHRLq", "public": "1", "uid": "12"}}

```

### RESPONSE:

Sample response:

```
{ "result": [
  { "ID": "2", "GroupID": "-1", "Name": "John
Doe", "Number": "123123123", "id_user": "1", "is_public": "false" },
  { "ID": "4", "GroupID": "-1", "Name": "Jan
Nowak", "Number": "4215456456", "id_user": "1", "is_public": "false" },
  { "ID": "5", "GroupID": "-
1", "Name": "Andy", "Number": "+441234155931", "id_user": "1", "is_public": "false"
}
]}
```

Response (when no data): {"result": "No data to display"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters):

```
{"result": "Wrong or missing >>uid<< parameter"}
{"result": "Wrong or missing >>public<< parameter"}
```

#### RESPONSE (EXTENDED):

Sample response:

```
{ "result": { "contacts": [
  { "ID": "2", "GroupID": "-1", "Name": "John
Doe", "Number": "123123123", "id_user": "1", "is_public": "false" },
  { "ID": "4", "GroupID": "-1", "Name": "Jan
Nowak", "Number": "4215456456", "id_user": "1", "is_public": "false" },
  { "ID": "5", "GroupID": "-
1", "Name": "Andy", "Number": "+441234155931", "id_user": "1", "is_public": "false"
}
], "status": "ok" }
```

Response (when no data):

```
{"result": { "error_text": " No data to display", "status": "error" }}
```

Response (when wrong logindata):

```
{"result": { "error_text": "Invalid login or password", "status": "error" }}
```

Response (when wrong access token):

```
{"result": { "error_text": "Invalid access token", "status": "error" }}
```

Response (when wrong parameters):

```
{"result": { "error_text": "Wrong or missing >>uid<<
parameter", "status": "error" }}
```

```
{"result": { "error_text": "Wrong or missing >>public<<
parameter", "status": "error" }}
```

### 39. Phonebook contact update: HTTP GET method

#### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/contact\\_update](https://url-of-smseagle/http_api/contact_update)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
contact_id	id of existing contact
contactname	name for the contact
number	phone number for the contact
public	<i>(optional parameter)</i> 0 = private group, 1 = public group
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

#### EXAMPLES:

```
https://url-of-smseagle/http_api/contact_update?  
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&contact_id=4&contactname=john  
lord&number=123456789&public=1
```

#### RESPONSE:

Response: **OK**

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters):

**Wrong or missing >>contactname<< parameter**

**Wrong or missing >>contact\_id<< parameter**

**Wrong or missing >>number<< parameter**

Response (when contact\_id is wrong): **Contact with the given id does not exists**

#### RESPONSE (XML):

Response:

```
<xml>  
  <status>ok</status>  
</xml>
```

Response (when wrong logindata):

```
<xml>  
  <error_text>Invalid login or password</error_text>
```

```
<status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong or missing >>contactname<< parameter</error_text>
  <status>error</status>
</xml>
```

```
<xml>
  <error_text>Wrong or missing >>contact_id<< parameter</error_text>
  <status>error</status>
</xml>
```

```
<xml>
  <error_text>Wrong or missing >>number<< parameter</error_text>
  <status>error</status>
</xml>
```

Response (when contact\_id is wrong):

```
<xml>
  <error_text>Contact with the given id does not exists</error_text>
  <status>error</status>
</xml>
```

## 40. Phonebook contact update: JSONRPC method

### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
contact_id	id of existing contact
contactname	name for the contact
number	phone number for the contact
public	<i>(optional parameter)</i> 0 = private group, 1 = public group

responsetype	(optional parameter) simple = format response as simple object with one result field (default), extended = format response as extended JSON object
--------------	--

#### EXAMPLES:

```
{ "method": "phonebook.contact_update",
  "params": { "access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "contact_id": "4",
    "contactname": "johnlord", "number": "123456789", "public": "1" } }
```

#### RESPONSE:

Response: {"result": "OK"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters):

```
{ "result": "Wrong or missing >>contactname<< parameter" }
```

```
{ "result": "Wrong or missing >>contact_id<< parameter" }
```

```
{ "result": "Wrong or missing >>number<< parameter" }
```

Response (when contact\_id is wrong): {"result": "Contact with the given id does not exists"}

#### RESPONSE (EXTENDED):

Response: {"result": {"status": "ok"}}

Response (when wrong logindata):

```
{ "result": { "error_text": "Invalid login or password", "status": "error" } }
```

Response (when wrong access token):

```
{ "result": { "error_text": "Invalid access token", "status": "error" } }
```

Response (when wrong parameters):

```
{ "result": { "error_text": "Wrong or missing >>contactname<< parameter", "status": "error" } }
```

```
{ "result": { "error_text": "Wrong or missing >>contact_id<< parameter", "status": "error" } }
```

```
{ "result": { "error_text": "Wrong or missing >>number<< parameter", "status": "error" } }
```

Response (when contact\_id is wrong):

```
{ "result": { "error_text": "Contact with the given id does not exists", "status": "error" } }
```

## 41. Phonebook contact delete: HTTP GET method

#### HTTP GET METHOD:

https://url-of-smseagle/http\_api/contact\_delete

Parameter	Description
-----------	-------------

access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
contact_id	id of existing contact
contactname	name of existing contact
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

#### EXAMPLES:

```
https://url-of-smseagle/http_api/contact_delete?
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&contact_id=4&contactname=john
lord
```

#### RESPONSE:

Response: **OK**

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters):

**Wrong or missing >>contactname<< parameter**

**Wrong or missing >>contact\_id<< parameter**

Response (when contact\_id is wrong): **Contact with the given id and name does not exists**

#### RESPONSE (XML):

Response:

```
<xml>
  <status>ok</status>
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
```

```

    <error_text>Wrong or missing >>contactname<< parameter</error_text>
    <status>error</status>
</xml>

```

```

<xml>
    <error_text>Wrong or missing >>contact_id<< parameter</error_text>
    <status>error</status>
</xml>

```

Response (when contact\_id is wrong):

```

<xml>
    <error_text>Contact with the given id and name does not exists </error_text>
    <status>error</status>
</xml>

```

## 42. Phonebook contact delete: JSONRPC method

### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
contact_id	id of existing contact
contactname	name of existing contact
responsetype	<i>(optional parameter)</i> simple = format response as simple object with one result field (default), extended = format response as extended JSON object

### EXAMPLES:

```

{"method": "phonebook.contact_delete",
"params": {"access_token": "0005gOjCO1MH8F2BPo8mWqcGzycVHRLq", "contact_id": "4", "contactname": "johnlord"}}

```

### RESPONSE:

Response: {"result": "OK"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters):

```

{"result": "Wrong or missing >>contactname<< parameter"}
{"result": "Wrong or missing >>contact_id<< parameter"}

```

Response (when contact\_id is wrong): {"result": "Contact with the given id and name does not exists"}

#### RESPONSE (EXTENDED):

Response: {"result":{"status":"ok"}}

Response (when wrong logindata):

```
{"result": {"error_text":"Invalid login or password","status":"error"}}
```

Response (when wrong access token):

```
{"result": {"error_text":"Invalid access token","status":"error"}}
```

Response (when wrong parameters):

```
{"result": {"error_text":"Wrong or missing >>contactname<<  
parameter","status":"error"}}
```

```
{"result": {"error_text":"Wrong or missing >>contact_id<<  
parameter","status":"error"}}
```

Response (when contact\_id is wrong):

```
{"result": {"error_text":"Contact with the given id and name does not  
exists","status":"error"}}
```

### 43. Call with termination: HTTP GET method

#### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/call\\_with\\_termination](https://url-of-smseagle/http_api/call_with_termination)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
to	phone numer to call
duration	connection duration (in seconds)
modem_no	<i>(optional parameter)</i> modem number (only for multimodem devices)
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

#### EXAMPLES:

[https://url-of-smseagle/http\\_api/call\\_with\\_termination?  
access\\_token=0005gOjC01MH8F2BPo8mWqcGzycVHRLq&to=123456789&duration=5](https://url-of-smseagle/http_api/call_with_termination?access_token=0005gOjC01MH8F2BPo8mWqcGzycVHRLq&to=123456789&duration=5)

#### RESPONSE:

Response: **OK**

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when modem doesn't support voice calls): **This modem doesn't support voice calls**

Response (when wrong parameters):

**Wrong or missing >>to<< parameter**

**Wrong or missing >>duration<< parameter**

Response (when modem\_no is wrong): **Modem not recognized**

#### RESPONSE (XML):

Response:

```
<xml>
  <status>ok</status>
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong or missing >>duration<< parameter</error_text>
  <status>error</status>
</xml>
```

Response (when modem doesn't support voice calls):

```
<xml>
  <error_text>This modem doesn't support voice calls</error_text>
  <status>error</status>
</xml>
```

Response (when modem\_no is wrong):

```
<xml>
  <error_text> Modem not recognized </error_text>
  <status>error</status>
</xml>
```

*Important notice: this method is available only for devices with 3G [voice modem](#)*

## 44. Call with termination: JSONRPC method

### HTTP POST METHOD:

https://url-of-smseagle/jsonrpc/sms

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
to	phone number to call
duration	connection duration (in seconds)
modem_no	<i>(optional parameter)</i> calling modem number (only for multimodem devices)
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

### EXAMPLES:

```
{"method":"phone.call_with_termination",  
"params":{"access_token":"0005gOjCOlMH8F2BPo8mWqcGzycVHRLq","to":"123456789",  
"duration":"5"}}
```

### RESPONSE:

Response: {"result": "OK"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when modem doesn't support voice calls): {"result": "This modem doesn't support voice calls"}

Response (when wrong parameters):

```
{"result": "Wrong or missing >>to<< parameter"}
```

```
{"result": "Wrong or missing >>duration<< parameter"}
```

Response (when modem\_no is wrong): {"result": "Modem not recognized"}

### RESPONSE (EXTENDED):

Response: {"result":{"status":"ok"}}

Response (when wrong logindata):

```
{"result": {"error_text":"Invalid login or password","status":"error"}}
```

Response (when wrong access token):

```
{"result": {"error_text":"Invalid access token","status":"error"}}
```

Response (when modem doesn't support voice calls):

```
{"result": {"error_text":"This modem doesn't support voice calls","status":"error"}}
```

Response (when wrong parameters):

```
{"result": {"error_text": "Wrong or missing >>to<< parameter", "status": "error"}}
```

```
{"result": {"error_text": "Wrong or missing >>duration<< parameter", "status": "error"}}
```

Response (when modem\_no is wrong):

```
{"result": {"error_text": "Modem not recognized", "status": "error"}}
```

*Important notice: this method is available only for devices with 3G [voice modem](#)*

## 45. Phonebook shift create: HTTP GET method

HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/shift\\_create](https://url-of-smseagle/http_api/shift_create)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
name	name for the created shift
enabled	0 = disabled, 1 = enabled
(mon-sun)_from	<i>shift start hour for each day of week</i>
(mon-sun)_to	<i>shift end hour for each day of week</i>
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

EXAMPLES:

```
https://url-of-smseagle/http_api/shift_create?  
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&name=myshift&mon_from=08:00&mon_to=16:00&wed_from=09:00&wed_to=20:00&enabled=1
```

RESPONSE:

Response: **OK; ID=[ID of created shift]**

Sample response: OK; ID=5

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters): **Wrong or missing >>name<< parameter**

RESPONSE (XML):

Response:

```
<xml>
```

```
<shift_id>[ID of created shift]</shift_id>
<status>ok</status>
</xml>
```

Sample response:

```
<xml>
  <shift_id>5</shift_id>
  <status>ok</status>
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong or missing >>name<< parameter</error_text>
  <status>error</status>
</xml>
```

## 46. Phonebook shift create: JSONRPC method

### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
name	name for the created shift
enabled	0 = disabled, 1 = enabled
(mon-sun)_from	<i>shift start hour for each day of week</i>
(mon-sun)_to	<i>shift end hour for each day of week</i>
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

#### EXAMPLES:

```
{"method": "phonebook.shift_create",
"params": {"access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "name": "myshift",
"mon_from": "08:00", "mon_to": "16:00", "wed_from": "09:00", "wed_to": "20:00", "enabled": "1"}}
```

#### RESPONSE:

Response: {"result": "OK; ID=[ID of created shift]"}

Sample response: {"result": "OK; ID=5"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters): {"result": "Wrong or missing >>name<< parameter"}

#### RESPONSE (EXTENDED):

Response:

```
{"result": {"shift_id": "[ID of created shift]", "status": "ok"}}
```

Sample response: {"result": {"shift\_id": "748", "status": "ok"}}

Response (when wrong logindata):

```
{"result": {"error_text": "Invalid login or password", "status": "error"}}
```

Response (when wrong access token):

```
{"result": {"error_text": "Invalid access token", "status": "error"}}
```

Response (when wrong parameters):

```
{"result": {"error_text": "Wrong or missing >>name<< parameter", "status": "error"}}
```

## 47. Phonebook shift read: HTTP GET method

#### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/shift\\_read](https://url-of-smseagle/http_api/shift_read)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
name	<i>(optional parameter)</i> shift name
enabled	<i>(optional parameter)</i> 0 = disabled, 1 = enabled
shift_id	<i>(optional parameter)</i> shift id
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

### EXAMPLES:

`https://url-of-smseagle/http_api/shift_read?  
access_token=0005gOjCOlMH8F2BPo8mWqcGzycVHRLq&name=myshift`

### RESPONSE:

Sample response: [link](#)

Response (when no data): **No data to display**

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters):

**Wrong >>shift\_id<< parameter**

### RESPONSE (XML):

Sample response:

```
<xml>  
<shifts>  
  <shift>  
    <id_shift>62</id_shift>  
    <name>myshift</name>  
    <mon_from>08:00</mon_from>  
    <mon_to>16:00</mon_to>  
    <tue_from/>  
    <tue_to/>  
    <wed_from>09:00</wed_from>  
    <wed_to>20:00</wed_to>  
    <thu_from/>  
    <thu_to/>  
    <fri_from/>  
    <fri_to/>  
    <sat_from/>  
    <sat_to/>  
    <sun_from/>  
    <sun_to/>  
    <enabled>>true</enabled>  
  </shift>  
</shifts>  
<status>ok</status>  
</xml>
```

Response (when no data):

```
<xml>  
  <error_text>No data to display</error_text>  
  <status>error</status>  
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text> Wrong >>id<< parameter</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text> Wrong >>enabled<< parameter</error_text>
  <status>error</status>
</xml>
```

## 48. Phonebook shift read: JSONRPC method

### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
name	<i>(optional parameter)</i> shift name
enabled	<i>(optional parameter)</i> 0 = disabled, 1 = enabled
shift_id	<i>(optional parameter)</i> shift id
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

### EXAMPLES:

```
{ "method": "phonebook.shift_read",
  "params": { "access_token": "0005gOjCO1MH8F2BPo8mWqcGzycVHRLq", "name": "myshift"
} }
```

## RESPONSE:

Sample response:

```
{
  "result": [
    {
      "id_shift": "62",
      "name": "myshift",
      "mon_from": "08:00",
      "mon_to": "16:00",
      "tue_from": null,
      "tue_to": null,
      "wed_from": "09:00",
      "wed_to": "20:00",
      "thu_from": null,
      "thu_to": null,
      "fri_from": null,
      "fri_to": null,
      "sat_from": null,
      "sat_to": null,
      "sun_from": null,
      "sun_to": null,
      "enabled": "true"
    }
  ]
}
```

Response (when no data): {"result": "No data to display"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters):

```
{"result": "Wrong >>enabled<< parameter"}
{"result": "Wrong >>shift_id<< parameter"}
```

## RESPONSE (EXTENDED):

Sample response:

```
{
  "result": {
    "shifts": [
      {
        "id_shift": "62",
        "name": "myshift",
        "mon_from": "08:00",
        "mon_to": "16:00",
        "tue_from": null,
        "tue_to": null,
        "wed_from": "09:00",
        "wed_to": "20:00",
        "thu_from": null,
        "thu_to": null,
        "fri_from": null,
        "fri_to": null,
        "sat_from": null,
        "sat_to": null,

```

```

        "sun_from": null,
        "sun_to": null,
        "enabled": "false"
    }
  ],
  "status": "ok"
}
}

```

Response (when no data):

```

{"result": {"error_text": " No data to display", "status": "error"}}

```

Response (when wrong logindata):

```

{"result": {"error_text": "Invalid login or password", "status": "error"}}

```

Response (when wrong access token):

```

{"result": {"error_text": "Invalid access token", "status": "error"}}

```

Response (when wrong parameters):

```

{"result": {"error_text": " Wrong >>enabled<< parameter ", "status": "error"}}

```

```

", "status": "error"}}

```

## 49. Phonebook shift update: HTTP GET method

HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/shift\\_update](https://url-of-smseagle/http_api/shift_update)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
shift_id	id of existing shift
name	name for the shift
enabled	0 = disabled, 1 = enabled
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

EXAMPLES:

```

https://url-of-smseagle/http_api/shift_update?
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&shift_id=24&name=updatedshift
&enabled=1

```

RESPONSE:

Response: **OK**

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters):

**Wrong or missing >>name<< parameter**

**Wrong or missing >>shift\_id<< parameter**

Response (when shift\_id is wrong): **Shift with the given id does not exists**

#### RESPONSE (XML):

Response:

```
<xml>
  <status>ok</status>
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong or missing >>name<< parameter</error_text>
  <status>error</status>
</xml>
```

```
<xml>
  <error_text>Wrong or missing >>shift_id<< parameter</error_text>
  <status>error</status>
</xml>
```

Response (when shift\_id is wrong):

```
<xml>
  <error_text>Shift with given id does not exists</error_text>
  <status>error</status>
</xml>
```

## 50. Phonebook shift update: JSONRPC method

### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
shift_id	id of existing shift
name	name for the shift
enabled	0 = disabled, 1 = enabled
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

#### EXAMPLES:

```
{ "method": "phonebook.shift_update",
  "params": { "access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "shift_id": "24",
    "name": "updatedshift", "enabled": "1" } }
```

#### RESPONSE:

Response: {"result": "OK"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters):

```
{ "result": "Wrong or missing >>name<< parameter" }
```

```
{ "result": "Wrong or missing >>shift_id<< parameter" }
```

Response (when shift\_id is wrong): {"result": "Shift with the given id does not exists"}

#### RESPONSE (EXTENDED):

Response: {"result": {"status": "ok"}}

Response (when wrong logindata):

```
{ "result": { "error_text": "Invalid login or password", "status": "error" } }
```

Response (when wrong access token):

```
{ "result": { "error_text": "Invalid access token", "status": "error" } }
```

Response (when wrong parameters):

```
{ "result": { "error_text": "Wrong or missing >>name<< parameter", "status": "error" } }
```

```
{ "result": { "error_text": "Wrong or missing >>shift_id<< parameter", "status": "error" } }
```

Response (when shift\_id is wrong):

```
{ "result": { "error_text": "Shift with the given id does not exists", "status": "error" } }
```

## 51. Phonebook shift delete: HTTP GET method

### HTTP GET METHOD:

`https://url-of-smseagle/http_api/shift_delete`

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
shift_id	id of existing shift
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

### EXAMPLES:

```
https://url-of-smseagle/http_api/shift_delete?  
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&shift_id=24
```

### RESPONSE:

Response: **OK**

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters):

**Wrong or missing >>shift\_id<< parameter**

Response (when shift\_id is wrong): **Shift with the given id does not exist**

### RESPONSE (XML):

Response:

```
<xml>  
  <status>ok</status>  
</xml>
```

Response (when wrong logindata):

```
<xml>  
  <error_text>Invalid login or password</error_text>  
  <status>error</status>  
</xml>
```

Response (when wrong access token):

```
<xml>  
  <error_text>Invalid Access token</error_text>  
  <status>error</status>  
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong or missing >>shift_id<< parameter</error_text>
  <status>error</status>
</xml>
```

Response (when shift\_id is wrong):

```
<xml>
  <error_text>Shift with the given id does not exists</error_text>
  <status>error</status>
</xml>
```

## 52. Phonebook shift delete: JSONRPC method

### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
shift_id	id of existing shift
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

### EXAMPLES:

```
{"method": "phonebook.shift_delete",
"params": {"access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "shift_id": "24"
}}
```

### RESPONSE:

Response: {"result": "OK"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters):

```
{"result": "Wrong or missing >>shift_id<< parameter"}
```

Response (when shift\_id is wrong): {"result": "Shift with the given id does not exist"}

### RESPONSE (EXTENDED):

Response: {"result": {"status": "ok"}}

Response (when wrong logindata):

```
{"result": {"error_text": "Invalid login or password", "status": "error"}}
```

Response (when wrong access token):

```
{"result": {"error_text": "Invalid access token", "status": "error"}}
```

Response (when wrong parameters):

```
{"result": {"error_text": "Wrong or missing >>shift_id<<  
parameter", "status": "error"}}
```

Response (when shift\_id is wrong):

```
{"result": {"error_text": "Shift with the given id does not  
exists", "status": "error"}}
```

## 53. Phonebook shift add contact: HTTP GET method

### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/shift\\_addcontact](https://url-of-smseagle/http_api/shift_addcontact)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
shift_id	id of existing shift (or id's separated with comma)
contact_id	id of contact. The contact will be added to the shift
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

### EXAMPLES:

```
https://url-of-smseagle/http_api/shift_addcontact?  
access_token=0005gOjCOlMH8F2BPo8mWqcGzycVHRLq&shift_id=2&contact_id=1
```

### RESPONSE:

Response: **OK**

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters):

**Wrong or missing >>shift\_id<< parameter**

**Wrong or missing >>contact\_id<< parameter**

Response (when id is wrong):

**Shift with the given id does not exists**

**Contact with the given id does not exists**

### RESPONSE (XML):

Response:

```
<xml>
  <status>ok</status>
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong or missing >>shift_id<< parameter</error_text>
  <status>error</status>
</xml>
```

```
<xml>
  <error_text>Wrong or missing >>contact_id<< parameter</error_text>
  <status>error</status>
</xml>
```

Response (when id is wrong):

```
<xml>
  <error_text>Shift with the given id does not exists</error_text>
  <status>error</status>
</xml>
```

```
<xml>
  <error_text>Contact with the given id does not exists</error_text>
  <status>error</status>
</xml>
```

## 54. Phonebook shift add contact: JSONRPC method

HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)

login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
shift_id	id of existing shift (or id's separated with comma)
contact_id	id of contact. The contact will be added to the shift
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

#### EXAMPLES:

```
{ "method": "phonebook.shift_addcontact",
  "params": { "access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "shift_id": "24",
             "contact_id": "1" } }
```

#### RESPONSE:

Response: {"result": "OK"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters):

```
{ "result": "Wrong or missing >>shift_id<< parameter" }
```

```
{ "result": "Wrong or missing >>contact_id<< parameter" }
```

Response (when id is wrong):

```
{ "result": "Shift with the given id does not exists" }
```

```
{ "result": "Contact with the given id does not exists" }
```

#### RESPONSE (EXTENDED):

Response: {"result":{"status":"ok"}}

Response (when wrong logindata):

```
{ "result": { "error_text": "Invalid login or password", "status": "error" } }
```

Response (when wrong access token):

```
{ "result": { "error_text": "Invalid access token", "status": "error" } }
```

Response (when wrong parameters):

```
{ "result": { "error_text": "Wrong or missing >>shift_id<< parameter", "status": "error" } }
```

```
{ "result": { "error_text": "Wrong or missing >>contact_id<< parameter", "status": "error" } }
```

Response (when id is wrong):

```
{ "result": { "error_text": "Shift with the given id does not exists", "status": "error" } }
```

```
{ "result": { "error_text": "Contact with the given id does not exists", "status": "error" } }
```

## 55. Phonebook shift remove contact: HTTP GET method

### HTTP GET METHOD:

`https://url-of-smseagle/http_api/shift_removecontact`

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
shift_id	id of existing shift (or id's separated with comma)
contact_id	id of contact. The contact will be added to the shift
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

### EXAMPLES:

`https://url-of-smseagle/http_api/shift_removecontact?  
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&shift_id=24&contact_id=1`

### RESPONSE:

Response: **OK**

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when wrong parameters):

**Wrong or missing >>shift\_id<< parameter**

**Wrong or missing >>contact\_id<< parameter**

Response (when id is wrong):

**Shift with the given id does not exists**

**Contact with the given id does not exists**

### RESPONSE (XML):

Response:

```
<xml>  
  <status>ok</status>  
</xml>
```

Response (when wrong logindata):

```
<xml>  
  <error_text>Invalid login or password</error_text>  
  <status>error</status>  
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when wrong parameters):

```
<xml>
  <error_text>Wrong or missing >>shift_id<< parameter</error_text>
  <status>error</status>
</xml>
```

```
<xml>
  <error_text>Wrong or missing >>contact_id<< parameter</error_text>
  <status>error</status>
</xml>
```

Response (when id is wrong):

```
<xml>
  <error_text>Shift with the given id does not exists</error_text>
  <status>error</status>
</xml>
```

```
<xml>
  <error_text>Contact with the given id does not exists</error_text>
  <status>error</status>
</xml>
```

## 56. Phonebook shift remove contact: JSONRPC method

### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
shift_id	id of existing shift (or id's separated with comma)
contact_id	id of contact. The contact will be added to the shift
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

### EXAMPLES:

```
{"method": "phonebook.shift_removecontact",
```

```
"params":{"access_token":"0005gOjCOLMH8F2BPo8mWqcGzycVHRLq","shift_id":"24",
"contact_id":"1"}}
```

#### RESPONSE:

Response: {"result": "OK"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when wrong parameters):

```
{"result": "Wrong or missing >>shift_id<< parameter"}
```

```
{"result": "Wrong or missing >>contact_id<< parameter"}
```

Response (when id is wrong):

```
{"result": "Shift with the given id does not exists"}
```

```
{"result": "Contact with the given id does not exists"}
```

#### RESPONSE (EXTENDED):

Response: {"result":{"status":"ok"}}

Response (when wrong logindata):

```
{"result": {"error_text":"Invalid login or password","status":"error"}}
```

Response (when wrong access token):

```
{"result": {"error_text":"Invalid access token","status":"error"}}
```

Response (when wrong parameters):

```
{"result": {"error_text":"Wrong or missing >>shift_id<< parameter","status":"error"}}
```

```
{"result": {"error_text":"Wrong or missing >>contact_id<< parameter","status":"error"}}
```

Response (when id is wrong):

```
{"result": {"error_text":"Shift with the given id does not exists","status":"error"}}
```

```
{"result": {"error_text":"Contact with the given id does not exists","status":"error"}}
```

## 57. Get modem state: HTTP GET method

#### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/get\\_modem\\_state](https://url-of-smseagle/http_api/get_modem_state)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
modem_no	<i>(optional parameter)</i> modem number to be queried (default = 1). Used only in multimodem devices

responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object
--------------	---

#### EXAMPLES:

https://url-of-smseagle/http\_api/get\_modem\_state?  
access\_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&modem\_no=1

#### RESPONSE:

Response: **enabled / disabled**

Sample response: enabled

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when modem doesn't exist): **Wrong modem number**

#### RESPONSE (XML):

Response:

```
<xml>
  <modem_status>
    enabled / disabled
  </modem_status>
  <status>
    ok
  </status>
</xml>
```

Sample response:

```
<xml>
  <modem_status>
    enabled
  </modem_status>
  <status>
    ok
  </status>
</xml>
```

Response (when wrong logindata):

```
<xml>
  <error_text>Invalid login or password</error_text>
  <status>error</status>
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when modem doesn't exist):

```
<xml>
  <error_text> Wrong modem number</error_text>
  <status>error</status>
</xml>
```

## 58. Get modem state: JSONRPC method

### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
modem_no	<i>(optional parameter)</i> modem number to be queried (default = 1). Used only in multimodem devices
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

### BODY:

```
{"method": "sms.get_modem_state",
"params": {"access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq"}}
```

### RESPONSE:

```
{"result": enabled / disabled }
```

Sample response: {"result": "enabled"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when modem doesn't exist): {"result": "Wrong modem number"}

### RESPONSE (EXTENDED):

Response:

```
{"result": {"modem_status": enabled / disabled, "status": "ok"}}
```

Sample response: {"result": {"modem\_status": "Wrong modem number", "status": "ok"}}

Response (when wrong logindata):

```
{"result": {"error_text": "Invalid login or password", "status": "error"}}
```

Response (when wrong access token):

```
{"result": {"error_text": "Invalid access token", "status": "error"}}
```

Response (when modem doesn't exist):

```
{"result": {"error_text": "Wrong modem number", "status": "error"}}
```

## 59. Set modem state: HTTP GET method

HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/set\\_modem\\_state](https://url-of-smseagle/http_api/set_modem_state)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
modem_no	<i>(optional parameter)</i> modem number for status change (default = 1). Used only in multimodem devices
status	<i>enabled / disabled</i>
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

EXAMPLES:

```
https://url-of-smseagle/http_api/set_modem_state?  
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&modem_no=1&status=enabled
```

RESPONSE:

Response: **OK**

Response (when wrong logindata): **Invalid login or password**

Response (when wrong access token): **Invalid access token**

Response (when modem doesn't exist): **Wrong modem number**

Response (when wrong modem state): **Wrong modem state**

RESPONSE (XML):

Response:

```
<xml>  
<status>  
  ok  
</status>  
</xml>
```

Response (when wrong logindata):

```
<xml>  
  <error_text>Invalid login or password</error_text>  
  <status>error</status>  
</xml>
```

Response (when wrong access token):

```
<xml>
  <error_text>Invalid Access token</error_text>
  <status>error</status>
</xml>
```

Response (when modem doesn't exist):

```
<xml>
  <error_text> Wrong modem number</error_text>
  <status>error</status>
</xml>
```

Response (when wrong modem state):

```
<xml>
  <error_text>Wrong modem state</error_text>
  <status>error</status>
</xml>
```

## 60. Set modem state: JSONRPC method

### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
modem_no	<i>(optional parameter)</i> modem number for status change (default = 1). Used only in multimodem devices
status	<i>enabled / disabled</i>
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

### BODY:

```
{"method": "sms.set_modem_state",
"params": {"access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq",
"status": "enabled"}}
```

### RESPONSE:

```
{"result": enabled / disabled }
```

Sample response: {"result": "enabled"}

Response (when wrong logindata): {"result": "Invalid login or password"}

Response (when wrong access token): {"result": "Invalid access token"}

Response (when modem doesn't exist): {"result": "Wrong modem number"}

Response (when wrong modem state): {"result": "Wrong modem state"}

#### RESPONSE (EXTENDED):

Response:

```
{"result":{"modem_status": enabled / disabled,"status":"ok"}}
```

Sample response: {"result": {"modem\_status": "Wrong modem number", "status": "ok"}}

Response (when wrong login data):

```
{"result": {"error_text": "Invalid login or password", "status": "error"}}
```

Response (when wrong access token):

```
{"result": {"error_text": "Invalid access token", "status": "error"}}
```

Response (when modem doesn't exist):

```
{"result": {"error_text": "Wrong modem number", "status": "error"}}
```

Response (when wrong modem state):

```
{"result": {"error_text": "Wrong modem state", "status": "error"}}
```

## 61. User ID read: HTTP GET method

#### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/userid\\_read](https://url-of-smseagle/http_api/userid_read)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
username	<i>username to be queried</i>
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

#### EXAMPLES:

```
https://url-of-smseagle/http_api/userid_read?  
access_token=0005gOjCOlMH8F2BPo8mWqcGzycVHRLq&username=myuser
```

#### RESPONSE:

Response: **User ID**

Sample response: 24

Response (when username parameter is missing): **Missing >>username<< parameter**

Response (when user doesn't exist): **Wrong >>username<< parameter**

#### RESPONSE (XML):

Response:

```
<xml>
  <status>
    ok
  </status>
</xml>
```

Response (when username parameter is missing):

```
<xml>
  <error_text>Missing >>username<< parameter</error_text>
  <status>error</status>
</xml>
```

Response (when user doesn't exist):

```
<xml>
  <error_text>Wrong >>username<< parameter</error_text>
  <status>error</status>
</xml>
```

## 62. User ID read: JSONRPC method

#### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
username	<i>username to be queried</i>
responsetype	<i>(optional parameter)</i> text = format response as text (default), xml = format response as XML object

#### BODY:

```
{"method": "phonebook.userid_read",
"params": {"access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "username": "myuser"}}
```

#### RESPONSE:

```
{"result": [user ID] }
```

Sample response: {"result": "24"}

Response (when username parameter is missing): {"result": "Missing >>username<< parameter"}

Response (when user doesn't exist): {"result": "Wrong >>username<< parameter"}

## RESPONSE (EXTENDED):

Response:

```
{"result":{"uid": [user ID],"status":"ok"}}
```

Sample response: {"result": {"uid":"24","status":"ok"}}

Response (when wrong logindata):

```
{"result": {"error_text":"Invalid login or password","status":"error"}}
```

Response (when wrong access token):

```
{"result": {"error_text":"Invalid access token","status":"error"}}
```

Response (when username parameter is missing):

```
{"result": {"error_text":"Missing >>username<<  
parameter","status":"error"}}
```

Response (when user doesn't exist):

```
{"result": {"error_text":"Wrong >>username<< parameter","status":"error"}}
```

## 63. Group members read: HTTP GET method

### HTTP GET METHOD:

[https://url-of-smseagle/http\\_api/group\\_members\\_read](https://url-of-smseagle/http_api/group_members_read)

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)
pass	your password to login to SMSEagle
group_id	ID of group to be queried
user_id	<i>(optional parameter) show only contacts created by user with given ID</i>
public	<i>(optional parameter) 0 = private, 1 = public</i>
responsetype	<i>(optional parameter) text = format response as text (default), xml = format response as XML object</i>

### EXAMPLES:

```
https://url-of-smseagle/http_api/group_members_read?  
access_token=0005gOjCO1MH8F2BPo8mWqcGzycVHRLq&group_id=11
```

### RESPONSE:

Sample response: [link](#)

Response (when wrong or missing group\_id parameter): **Wrong or missing >>group\_id<< parameter**

Response (when wrong user\_id parameter): **Wrong >>user\_id<< parameter**

Response (when wrong public parameter): **Wrong >>public<< parameter**

Response (when result set is empty): **No data to display**

### RESPONSE (XML):

Response:

```

<xml>
  <contacts>
    <contact>
      <ID>17</ID>
      <Name>mycontact1</Name>
      <Number>23456</Number>
      <id_user>1</id_user>
      <is_public>true</is_public>
    </contact>
    <contact>
      <ID>24</ID>
      <Name>mycontact3</Name>
      <Number>12345</Number>
      <id_user>3</id_user>
      <is_public>>false</is_public>
    </contact>
  </contacts>
</xml>

```

Response (when wrong or missing group\_id parameter):

```

<xml>
  <error_text>Wrong or missing >>group_id<< parameter</error_text>
  <status>error</status>
</xml>

```

Response (when wrong user\_id parameter):

```

<xml>
  <error_text>Wrong >>user_id<< parameter</error_text>
  <status>error</status>
</xml>

```

Response (when wrong public parameter):

```

<xml>
  <error_text> Wrong >>public<< parameter </error_text>
  <status>error</status>
</xml>

```

## 64. Group members read: JSONRPC method

### HTTP POST METHOD:

<https://url-of-smseagle/jsonrpc/sms>

Parameter	Description
access_token	authentication access token (see details in point API Authentication)
login	your user to login to SMSEagle (see details in point API Authentication)

pass	your password to login to SMSEagle
group_id	ID of group to be queried
user_id	<i>(optional parameter) show only contacts created by user with given ID</i>
public	<i>(optional parameter) 0 = private, 1 = public</i>
responsetype	<i>(optional parameter) text = format response as text (default), xml = format response as XML object</i>

#### BODY:

```
{ "method": "phonebook.group_members_read",
  "params": { "access_token": "0005gOjCOlMH8F2BPo8mWqcGzycVHRLq", "group_id": "11"
} }
```

#### RESPONSE:

Sample response:

```
{
  "result": [
    { "ID": "1706", "Name": "mycontact1", "Number": "23456",
      "id_user": "1", "is_public": "true" },
    { "ID": "1693", "Name": "mycontact3", "Number": "12345",
      "id_user": "3", "is_public": "false" }
  ]
}
```

Response (when wrong or missing group\_id parameter): {"result": "Wrong or missing >>group\_id<< parameter"}

Response (when wrong user\_id parameter): {"result": "Wrong >>user\_id<< parameter"}

Response (when wrong public parameter): {"result": "Wrong >>public<< parameter"}

#### RESPONSE (EXTENDED):

Sample response:

```
{
  "result": {
    "contacts": [
      { "ID": "1706", "Name": "mycontact1", "Number": "23456",
        "id_user": "1", "is_public": "true" },
      { "ID": "1693", "Name": "mycontact3", "Number": "12345",
        "id_user": "3", "is_public": "false" }
    ],
    "status": "ok"
  }
}
```

Response (when wrong logindata):

```
{"result": {"error_text": "Invalid login or password", "status": "error"}}
```

Response (when wrong access token):

```
{"result": {"error_text": "Invalid access token", "status": "error"}}
```

Response (when wrong or missing group\_id parameter):

```
{"result": {"error_text": "Wrong or missing >>group_id<< parameter", "status": "error"}}
```

Response (when wrong user\_id parameter):

```
{"result": "Wrong >>user_id<< parameter"}
```

Response (when wrong public parameter):

```
{"result": "Wrong >>public<< parameter"}
```

## PLUGINS AND INTEGRATION MANUALS FOR NMS & AUTH SYSTEMS

---

SMSEagle has a number of ready-to-use plugins and integration manuals for an easy and quick integration of SMSEagle device with external software (Network Monitoring Systems, Authentication Systems and other). The list grows constantly and is published on SMSEagle website. For a complete and up to date list of plugins please go to: <http://www.smseagle.eu/integration-plugins/>

## EXTRAS

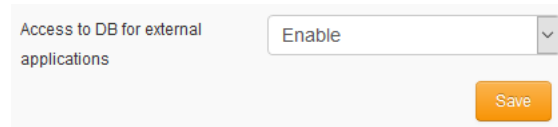

---

### Connecting directly to SMSEagle database

---

SMSEagle's database operates on PostgreSQL database engine. You may use a direct access to database for reading/writing SMS messages directly from/to database via SQL queries.

**The database access for external applications is disabled by default.** In order to enable it, go to webGUI > menu Settings and enable to following setting:

Access to DB for external applications  Save

Once database access is enabled, it is possible to connect to the database from external application using the following credentials:

#### POSTGRESQL DATABASE CREDENTIALS

Host: IP address of your device

Database name: smseagle

User: smseagleuser

Password: postgreeagle

### Injecting short SMS using SQL

---

The simplest example is short text message (limited to 160 chars):

```
INSERT INTO outbox (  
  DestinationNumber,  
  TextDecoded,  
  CreatorID,  
  Coding,  
  Class,  
  SenderID  
) VALUES (  
  '1234567',  
  'This is a SQL test message',  
  'Program',  
  'Default_No_Compression',  
  -1,
```

```

    'smseagle1'
);

INSERT INTO user_outbox (
    id_outbox,
    id_user
) SELECT CURRVAL(pg_get_serial_sequence('outbox','ID')), 1;

```

In the above example the message will belong to user with **id\_user** 1 (default 'admin'). You can find id\_user values for other users in table public."user". Field SenderID contains identification number of SMSEagle modem. For modem 1 SenderID = smseagle1, SenderID = smseagle2 for modem 2, etc.

## Injecting long SMS using SQL

---

Inserting multipart messages is a bit more tricky, you need to construct also UDH header and store it hexadecimally written into UDH field. Unless you have a good reason to do this manually, use API.

For long text message, the UDH starts with 050003 followed by byte as a message reference (you can put any hex value there, but it should be different for each message, D3 in following example), byte for number of messages (02 in example, it should be unique for each message you send to same phone number) and byte for number of current message (01 for first message, 02 for second, etc.).

For example long text message of two parts could look like following:

```

INSERT INTO outbox (
    "DestinationNumber",
    "CreatorID",
    "MultiPart",
    "UDH",
    "TextDecoded",
    "Coding",
    "Class",
    "SenderID"
) VALUES (
    '1234567',
    'Program',
    'true',
    '050003D30201',
    'Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do
    eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad
    minim veniam, qui',
    'Default_No_Compression',
    -1,
    'smseagle1'
)

INSERT INTO outbox_multipart (

```

```

        "ID",
        "SequencePosition",
        "UDH",
        "TextDecoded",
        "Coding",
        "Class"
) SELECT
    CURRVAL(pg_get_serial_sequence('outbox','ID')),
    2,
    '050003D30202',
    's nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo
consequat.',
    'Default_No_Compression',
    -1;

INSERT INTO user_outbox (
    id_outbox,
    id_user
) SELECT
    CURRVAL(pg_get_serial_sequence('outbox','ID')),
    1;

```

*Note: Adding UDH means that you have less space for text, in above example you can use only 153 characters in single message.*

## Database cleaning scripts

---

We have added some useful scripts which may be used to delete SMS messages from database through Linux CLI.

Scripts are located at following directory:

`/opt/scripts/`

- **db\_delete** - script for deleting SMS from folders Inbox, SentItems older than provided date.  
Usage:  
`./db_delete YYYYMMDDhhmm`
- **db\_delete\_7days** - script for deleting SMS from folders Inbox, SentItems older than 7 days.  
Usage:  
`./db_delete_7days`
- **db\_delete\_allfolders** - script for cleaning PostgreSQL database folders (Inbox, SentItems, Outbox). Specially designed to run periodically through *cron*. Usage:  
`./db_delete_allfolders`
- **db\_delete\_select** - script for deleting SMS from chosen database folder (Inbox, Outbox, SentItems, Trash). Usage:  
`./db_delete_select {inbox|outbox|sentitems|trash}`

### Adding script to system *cron* daemon

1) Create a file inside `/etc/cron.d/` directory with your desired name (eg. *pico db\_cleaner*)

2) Example content of this file:

```
0 0 1 * * root /opt/scripts/db_delete_allfolders
```

This will run cleaning script every 1<sup>st</sup> day of month.

“Simple Network Management Protocol (SNMP) is an Internet-standard protocol for managing devices on IP networks. It is used mostly in network management systems to monitor network-attached devices for conditions that warrant administrative attention” (source: Wikipedia).

SMSEagle device has a built-in Net-SNMP agent. The SNMP agent provides access to Linux Host MIB tree of the device, and additionally (using extension NET-SNMP-EXTEND-MIB) allows access to custom metrics specific to SMSEagle.

Available SNMP metrics that describe a state of a SMSEagle device are:

Metric name	Description	OID
<b>GSM_Signal1</b>	Returns GSM/3G/4G signal strength in percent for modem 1. Value range: 0-100. If modem is disconnected from cellular network GSM_Signal returns 0.	.1.3.6.1.4.1.8072.1.3.2.3.1.2.11.71.83.77.95.83.105.103.110.97.108.49
<b>GSM_Signal[X]</b>	Returns GSM/3G/4G signal strength in percent for modem X. Value range: 0-100. If modem is disconnected from cellular network GSM_Signal returns 0.	.1.3.6.1.4.1.8072.1.3.2.3.1.2.11.71.83.77.95.83.105.103.110.97.108.[48+X]
<b>GSM_NetName1</b>	Returns cellular network name on modem 1	.1.3.6.1.4.1.8072.1.3.2.3.1.2.12.71.83.77.95.78.101.116.78.97.109.101.49
<b>GSM_NetName[X]</b>	Returns cellular network name used on modem X	.1.3.6.1.4.1.8072.1.3.2.3.1.2.12.71.83.77.95.78.101.116.78.97.109.101.[48+X]
<b>FolderOutbox_Total</b>	Returns number of SMS messages in Outbox folder (outgoing queue length)	.1.3.6.1.4.1.8072.1.3.2.3.1.2.18.70.111.108.100.101.114.79.117.116.98.111.120.95.84.111.116.97.108
<b>FolderInbox_Total</b>	Returns number of SMS messages in Inbox folder	.1.3.6.1.4.1.8072.1.3.2.3.1.2.17.70.111.108.100.101.114.73.110.98.111.120.95.84.111.116.97.108
<b>FolderSent_Last24H</b>	Returns number of SMS messages sent from the device within last 24 hours	.1.3.6.1.4.1.8072.1.3.2.3.1.2.18.70.111.108.100.101.114.83.101.110.116.95.76.97.115.116.50.52.72
<b>FolderSent_Last1M</b>	Returns number of SMS messages sent from the device within last month	.1.3.6.1.4.1.8072.1.3.2.3.1.2.17.70.111.108.100.101.114.83.101.110.116.95.76.97.115.116.49.77

<b>FolderSent_Last24HSendErr</b>	Returns number of SMS messages sent with error within last 24h. Error occurs when 3G modem cannot send SMS message or message is rejected by GSM /3G carrier (mostly happens when a credit on pre-paid SIM card is over)	.1.3.6.1.4.1.8072.1.3.2.3.1.2.25.70 .111.108.100.101.114.83.101.110.116.95.76.97.115.116.50.52.72.83.101.110.100.69.114.114
----------------------------------	--	--

## RESULT VALUES

- Using OID

Result values for each custom metric are available and can be fetched from OID given in table above.

- Using textual name

Alternatively result values for each custom metric can be fetched using textual names from OID tree under: NET-SNMP-EXTEND-MIB::nsExtendOutputFull."[METRIC NAME]"

*For example:*

*Result value for parameter **GSM\_Signal1**:*

*NET-SNMP-EXTEND-MIB::nsExtendOutputFull.'GSM\_Signal1'*

*If your chosen SNMP tool cannot access NET-SNMP-EXTEND-MIB objects, you can download MIB definitions from: <http://www.smseagle.eu/download/NET-SNMP-EXTEND-MIB.txt>*

## READING RESULT VALUES

In order to test-read the parameter values from SNMP agent you can use any tools available for SNMP protocol (for example: NET-SNMP library for Linux or iReasoning MiB-Browser for Windows).

### EXAMPLE OF READING **GSM\_SIGNAL1** VALUE USING NET-SNMP LIBRARY

a) Command for reading the result value:

```
snmpget -v 2c -c public localhost
.1.3.6.1.4.1.8072.1.3.2.3.1.2.11.71.83.77.95.83.105.103.110.97.108.49
```

Result:

```
NET-SNMP-EXTEND-MIB::nsExtendOutputFull."GSM_Signal1" = STRING: 54
```

*Comment: GSM/3G/4G Signal strength value is 54%*

### EXAMPLE OF READING **GSM\_NETNAME1** VALUE USING NET-SNMP LIBRARY

a) Command for reading the result value:

```
snmpget -v 2c -c public localhost
.1.3.6.1.4.1.8072.1.3.2.3.1.2.12.71.83.77.95.78.101.116.78.97.109.101.49
```

Result:

```
NET-SNMP-EXTEND-MIB::nsExtendOutputFull."GSM_NetName1" = STRING: PLAY
```

*Comment: Currently used network at SIM card #1 is PLAY*

#### EXAMPLE OF READING **FOLDEROUTBOX\_TOTAL** VALUE USING NET-SNMP LIBRARY (AND TEXTUAL NAME OF METRIC)

a) Command for reading the result value:

```
snmpget -v 2c -c public ip-of-smseagle 'NET-SNMP-EXTEND-
MIB::nsExtendOutputFull."FolderOutbox_Total"'
```

Result:

```
NET-SNMP-EXTEND-MIB::nsExtendOutputFull."FolderOutbox_Total" = STRING: 0
```

*Comment: Number of SMS messages waiting in outbox queue is 0*

#### EXAMPLE OF READING **SYSTEMUPTIME** FROM LINUX HOST USING NET-SNMP LIBRARY

a) Command for reading the result value:

```
snmpget -v 2c -c public ip-of-smseagle system.sysUpTime.0
```

Result:

```
DISMAN-EVENT-MIB::sysUpTimeInstance = Timeticks: (216622) 0:36:06.22
```

*Comment: Linux system is up for 36 hours, 6.22 minutes*

#### EXAMPLE OF BROWSING SMSEAGLE EXTENSION PARAMETERS IN MIB TREE USING NET-SNMP LIBRARY

a) Command for reading the result value:

```
snmpwalk -v 2c -c public ip-of-smseagle .1.3.6.1.4.1.8072.1.3.2.3.1.2
```

Result:

```
NET-SNMP-EXTEND-MIB::nsExtendOutputFull."GSM_Signal1" = STRING: 54
```

```
NET-SNMP-EXTEND-MIB::nsExtendOutputFull."GSM_Signal2" = STRING: 54
```

...

```
NET-SNMP-EXTEND-MIB::nsExtendOutputFull."GSM_NetName1" = STRING: PLAY
```

```
NET-SNMP-EXTEND-MIB::nsExtendOutputFull."GSM_NetName2" = STRING: PLAY
```

...

```
NET-SNMP-EXTEND-MIB::nsExtendOutputFull."FolderInbox_Total" = STRING: 15
```

```
NET-SNMP-EXTEND-MIB::nsExtendOutputFull."FolderSent_Last1M" = STRING: 19
```

```
NET-SNMP-EXTEND-MIB::nsExtendOutputFull."FolderOutbox_Total" = STRING: 0
```

NET-SNMP-EXTEND-MIB::nsExtendOutputFull."FolderSent\_Last24H" = STRING: 0

NET-SNMP-EXTEND-MIB::nsExtendOutputFull." FolderSent\_Last24HSendErr" = STRING: 0

### EXAMPLE OF BROWSING SMSEAGLE EXTENSION PARAMETERS IN MIB TREE USING MIB-BROWSER

The screenshot shows the iReasoning MIB Browser interface. The left pane displays the MIB tree structure, with the following path highlighted: iso.org.dod.internet > mgmt > private > enterprises > netSnm > netSnmObjects > nsExtensions > nsSmpExtendMIB > nsExtendObjects > nsExtendOutputTable > nsExtendOutputEntry > nsExtendOutputFull. The right pane shows a 'Result Table' with the following data:

Name/OID	
nsExtendArgs.10.71.83.77.95.83.105.103.110.97.108	signal
nsExtendArgs.17.70.111.108.100.101.114.73.110.98.111.120.95.84.111.116.97.108	inbox
nsExtendArgs.17.70.111.108.100.101.114.83.101.110.116.95.76.97.115.116.49.77	sent1m
nsExtendArgs.18.70.111.108.100.101.114.79.117.116.98.111.120.95.84.111.116.97.108	outbox
nsExtendArgs.18.70.111.108.100.101.114.83.101.110.116.95.76.97.115.116.50.52.72	sent24h
nsExtendOutputFull.10.71.83.77.95.83.105.103.110.97.108	54
nsExtendOutputFull.17.70.111.108.100.101.114.73.110.98.111.120.95.84.111.116.97.108	74
nsExtendOutputFull.17.70.111.108.100.101.114.83.101.110.116.95.76.97.115.116.49.77	504
nsExtendOutputFull.18.70.111.108.100.101.114.79.117.116.98.111.120.95.84.111.116.97.108	0
nsExtendOutputFull.18.70.111.108.100.101.114.83.101.110.116.95.76.97.115.116.50.52.72	0

Below the tree, a table provides details for the selected object:

Name	nsExtendOutputFull
OID	.1.3.6.1.4.1.8072.1.3.2.3.1.2
MIB	NET-SNMP-EXTEND-MIB
Syntax	DISPLAYSTRING
Access	read-only
Status	current
DefVal	
Augments	nsExtendConfigEntry

### Setting up SNMP v3 access control

By default SMSEagle devices uses SNMP v2 access control. Using v3 can strengthen security, however is not obsolete. To ease switch to SNMP v3 access control we've prepared special shell script located at `/opt/smseagle` directory.

1. Log in via SSH using root account
2. Navigate to:  
`cd /opt/smseagle/`
3. Configuration script:  
`./snmpv3`
4. Script can run with following parameters:
  - i. `add`
  - ii. `del`
  - iii. `enablev2`
  - iv. `disablev2`
5. To add v3 USER please run:  
`./snmpv3 add USERNAME PASSWORD ENCRYPTIONPASSWORD`

6. *To delete USER please run:*  
`./snmpv3 del`

7. *To disable v2 access policy run:*  
`./snmpv3 disablev2`

8. *To enable v2 access policy run:*  
`./snmpv3 enablev2`

## Failover (HA-cluster) feature

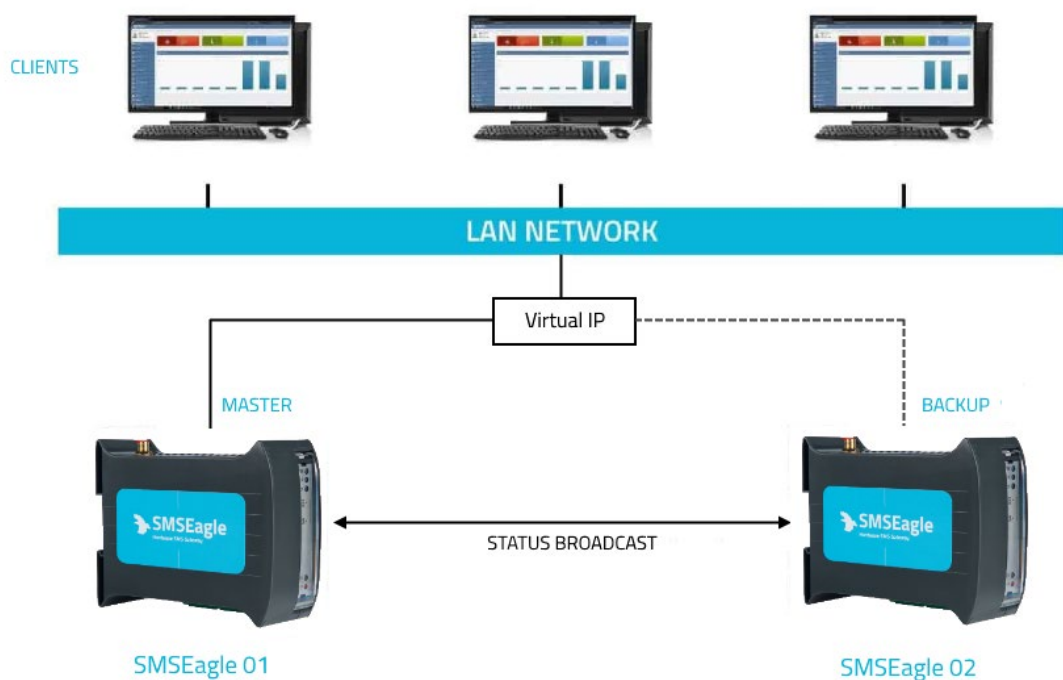

'High-availability clusters (also known as HA clusters or fail over clusters) are groups of computers (...) that can be reliably utilized with a minimum of down-time. They operate by using high availability software to harness redundant computers in groups or clusters that provide continued service when system components fail. Without clustering, if a server running a particular application crashes, the application will be unavailable until the crashed server is fixed. HA clustering remedies this situation by detecting hardware/software faults, and immediately restarting the application on another system or whole node without requiring administrative intervention, a process known as failover.' (source: Wikipedia)

SMSEagle NXS-family devices their own failover mechanism based on HA-cluster. This feature allows you to assure high availability of SMSEagle devices in critical environments. To enable failover (HA-cluster) you need at least 2 devices ('aka' nodes). The failover feature monitors devices working in the cluster, and detects faults with the following services:

1. Apache2 WWW server
2. PostgreSQL database
3. SNMP agent
4. Modem software (Gammu-SMSD daemon)
5. Accessibility (response to ping) of whole node.

Every node in a cluster can have one of three states:

- **Master:** main healthy node in a cluster, by default accessible through Virtual IP
- **Backup:** second healthy node in a cluster, ready and waiting for replacing Master when needed
- **Fault:** node with detected service fault

In the cluster you have one MASTER device and one BACKUP device. **HA-cluster is accessed via Virtual IP address.** When the daemon running at MASTER device detects failure of at least one described feature, it immediately automatically switches cluster's IP assignment to the BACKUP device (node) providing continuous usage of the SMSEagle HA-cluster for the user.

Devices (nodes) should see each other on the network. By default, HA-nodes use 224.0.0.18 multicast IP address for VRRP (Virtual Router Redundancy Protocol) for communication between two nodes. If nodes are on the same network (same subnet & IP range) there is no need for any network configuration. If two nodes are behind firewalls, make sure firewall is configured to accept multicast and VRRP protocol (IP Protocol #112).

#### HOW TO CONFIGURE FAILOVER (HA-CLUSTER):

Failover cluster can be easily configured using web-gui. Configuration can be done in menu "Settings" > tab "Failover". For **each** device in failover cluster:

- enter virtual IP address in the field "Virtual IP Address"
- enter Master and Backup IP addresses (these should be physical addresses of your devices)
- set "Enable Failover cluster" to "Yes"
- optionally you can enable database replication between nodes (feature available only in devices with hardware Rev.2 and higher)

**Save** configuration. **Reboot** each device after saving. The configuration should be exactly the same on both devices in HA-cluster.

General settings

Application IP Settings **Failover** Date/Time Maintenance Backup/Restore Updates Sysinfo

Enable Failover cluster Yes

Failover status Enabled

Current device status MASTER

Virtual IP Address 192.168.0.250

Master IP 192.168.0.139

Backup IP 192.168.0.140

Enable database replication

*Please note:*

- Failover (HA) cluster requires 2 devices for operation
- Both devices must have the same failover configuration
- Virtual IP address must be in the same subnet as the device's physical IP address
- Result of a proper work of a failover cluster is one MASTER device, and one BACKUP device
- You can enable database replication to synchronize Folders/Phonebook contacts/Users from MASTER to BACKUP node
- Enabling DB replication will allow external database access for IP addresses of master/backup nodes

Save

Screenshot from "General settings-Failover"

**Database replication** between nodes allows to automatically replicate database content from MASTER to BACKUP (one direction only). In the current software version, the following content is replicated: Folders (with messages), Phonebook contacts, Users. Please note that this feature is only available in devices with hardware Rev.2 and higher.

After correct configuration of the HA-cluster **you should access the cluster via its Virtual IP address.**

### SNMP-monitoring of HA-cluster

Failover feature uses KEEPALIVED-MIB for SNMP monitoring.

#### EXAMPLE OF READING DEVICE CLUSTER STATE VALUE USING NET-SNMP LIBRARY

a) Command for reading the result value:

```
snmpget -v 2c -c public ip-of-smseagle .1.3.6.1.4.1.9586.100.5.2.3.1.4.1
```

Result:

```
KEEPALIVED-MIB::vrrpInstanceState.1 = INTEGER: master(2)
```

*Comment: Current device state is master*

## Forwarding logs to external server

---

Our devices runs rsyslog for log managing. Here we describe how to configure additional rules for rsyslog daemon: rsyslogd. This is only a brief excerpt from rsyslog manual website. Full information is available at: <http://www.rsyslog.com/>

Rsyslogd configuration is managed using a configuration file located at */etc/rsyslog.conf*

- At the bottom of the configuration file add:

```
*.* action(type="omfwd" target="SERVER_IP" port="PORT" protocol="PROTOCOL"
action.resumeRetryCount="10"
queue.type="linkedList" queue.size="10000")
```

where: SERVER\_IP – IP (or FQDN) address of receiving server  
PORT – port on receiving server  
PROTOCOL one of the values: tcp, udp

- Example:

## Automatic software updates checks

---

SMSEagle software is under process of continual improvement. We listen to our customers, and new releases are based on our customer's inputs/requests. Software updates are released frequently, and offer access to new features and fixes to reported issues. Web-GUI offers you a possibility to automatically check for new software updates. This can be done in two ways:

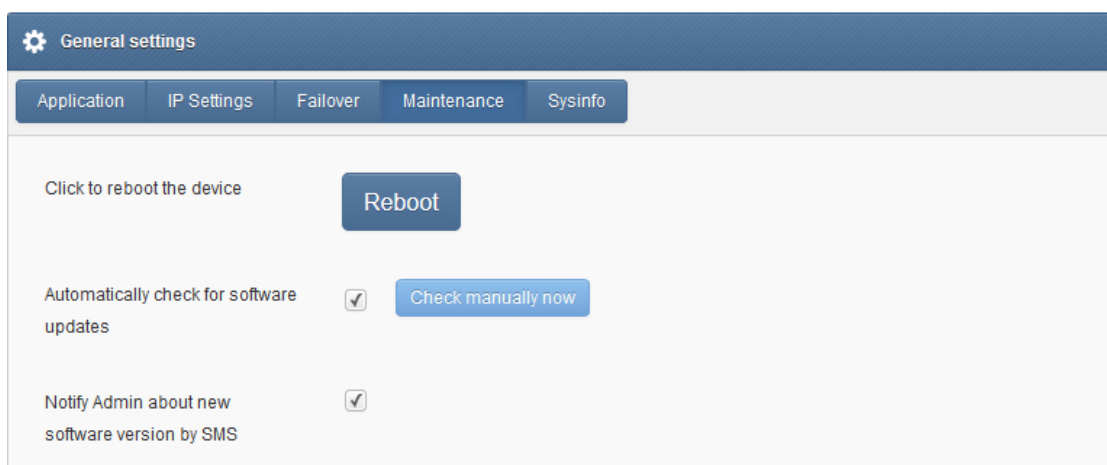

### MANUAL CHECK

In order to manually check for available software updates go to menu Settings > tab Maintenance. Click on the button "Check manually now". At the top pops up a balloon in red with information if it is up-to-date.

### AUTOMATIC CHECK

In order to start automatic checks for software updates go to menu Settings > tab Maintenance, and check the option "Automatically check for software updates". This will enable periodic checks (once a month) for available software updates. If a new update is available, a message "Update Available" will appear in menu Settings> Sysinfo – next to the current software version number.

If you select "Notify Admin about new software version by SMS", the device will additionally send SMS to the default admin account (if the phone number is entered in the account) with a notification about new software update.

*Screenshot from "General settings-Maintenance"*

*Notice: Your SMSEagle device must have a HTTPS connectivity with address [www.smseagle.eu](https://www.smseagle.eu) in order for this feature to work.*

# TROUBLESHOOTING

## TROUBLESHOOTING

---

To make sure that the device is working properly, follow the three steps:

1. Verification of LEDs
2. Checking the device configuration (IP Settings)
3. Check the device logs (description below)

### Verification of LEDs

Normal operation of the device is signaled by LEDs as follows:

LED	Correct operation
<b>Power (button light)</b>	Continuously lit
<b>STATUS</b>	Blinking
<b>ACTIVE1-8</b>	Slow flashing in stand-by mode, Quick flashing when modem 1 in use

### Checking the device information

The device information (device type, software version, modem IMEI, IMSI, network signal strength, network name) can be found under menu "Settings" > "Sysinfo".

### Device logs

Under menu "Settings" > "Sysinfo" you can find latest lines of device logs: modem log, database log and system log. In case of any problems with the device these logs are a valuable source of troubleshooting information.

Extended device logs can be downloaded via button "Download device logs" in menu "Settings" > "Sysinfo".

### When the device is not reachable

1. Check if the device is correctly connected to the network. Check LED status of RJ45 socket.
2. In the case when the device does not respond due to a malfunction or incorrect user settings please reboot the device by disconnecting and connecting power source (or pressing Reset switch).
3. If you still cannot connect with the device, it is possible to restore to factory IP settings by using the SW button.

## Restoring factory defaults

This action restores the following settings to default values: **IP settings, time zone settings, database content, Linux OS users/passwords**

In order to restore factory defaults proceed with the following steps:

1. When the device is ready to operate (STATUS LED is blinking)
2. **Press and hold SW button for 10 seconds**
3. Release SW button after 10 seconds (you will see "Factory reset" on display)
4. Wait until system reboots.

*Please note, that after reboot the device will be finishing the process of factory reset, therefore it can take longer for the system to start.*

# IV

## SERVICE & REPAIR

## SERVICE & REPAIR

---

### Warranty

---

Your SMSEagle comes with a standard 1 year of technical support and hardware repair warranty coverage. The standard warranty can be extended during device purchase to 3-years coverage (check your purchase conditions). For a detailed information on warranty terms and conditions check warranty card that comes with your device or follow the link: [www.smseagle.eu/docs/general\\_warranty\\_terms\\_and\\_conditions.pdf](http://www.smseagle.eu/docs/general_warranty_terms_and_conditions.pdf)

### Service

---

Before contacting with support team, be sure that you have read Troubleshooting section of this manual. SMSEagle Support Team is available by email or telephone.

Support Email: [support@smseagle.eu](mailto:support@smseagle.eu)

Support telephone: + 48 61 6713 411

The support service is provided by:

Proximus Software

ul. Piątkowska 163,

60-650 Poznan, Poland

**WHEN CONTACTING SUPPORT TEAM, BE PREPARED TO PROVIDE THE FOLLOWING INFORMATION:**

#### **System Logs**

Go to menu Settings > Sysinfo > "Download device logs". Provide log package to support team when requested.

#### **MAC address**

Each SMSEagle device has its unique MAC address. MAC address is printed on the device body or can be found in menu Settings > IP Settings

**V**

**TECH SPECS  
& SAFETY  
INFORMATION**

### Technical Specification

---

#### HARDWARE SPECIFICATION

- Processor type: Intel(R) Celeron(R) CPU N3350
- Operational memory (RAM): 2GB DDR4
- 32GB eMMC storage
- Network interface: Gigabit Ethernet 10/100/1000 TX (2xRJ45)
- HDMI+DP (for debugging purposes only)
- Other external ports: 2x USB 3.0
- Power consumption: 40W max
- Noise level: Fan-less
- Dimensions: (width x depth x height) 44 x 15.5 x 4.5 cm
- Weight: 1.8 kg
- Casing: metal (rack mount)
- Operating parameters:
  - Operating temperature: 32-140°F / 0~60°C
  - Humidity: 0%~90%RH (non-condensing)
- 8x Internal modem

#### MHD-8100-3G:

- Waveband: GSM, UMTS
- GSM/GPRS quad-band 850/900/1800/1900 MHz
- UMTS 800/850/900/AWS 1700/1900/2100 MHz
- Output power (Rated):
  - E-GSM 900: Class 4, DCS 1800: Class 1
  - EDGE 900: Class E2, EDGE 1800: Class E2
  - FDD I: Class 3, FDD VIII: Class 3

#### MHD-8100-4G:

- Waveband: GSM, UMTS, LTE
- LTE FDD: B1/B2/B3/B4/B5/B7/B8/B12/B13/B18/B19/B20/B25/B26/B28
- LTE TDD: B38/B39/B40/B41

- UMTS: B1/B2/B4/B5/B6/B8/B19
- GSM: B2/B3/B5/B8
- Output power (Rated):
  - Class 4 (33dBm±2dB) for GSM850
  - Class 4 (33dBm±2dB) for EGSM900
  - Class 1 (30dBm±2dB) for DCS1800
  - Class 1 (30dBm±2dB) for PCS1900
  - Class E2 (27dBm±3dB) for GSM850 8-PSK
  - Class E2 (27dBm±3dB) for EGSM900 8-PSK
  - Class E2 (26dBm±3dB) for DCS1800 8-PSK
  - Class E2 (26dBm±3dB) for PCS1900 8-PSK
  - Class 3 (24dBm+1/-3dB) for WCDMA bands
  - Class 3 (23dBm±2dB) for LTE-FDD bands
  - Class 3 (23dBm±2dB) for LTE-TDD bands
  
- SIM card standard: mini
- Antenna connector: 8x SMA
- Country of origin: European Union (Poland)

## POWER SUPPLY

AC line input

Voltage ranges: 100–240V alternating current (AC)

Frequency: 50–60Hz single phase

AC plug type: IEC13 (AC socket type: IEC14)

## ANTENNA

- Omnidirectional 2dBi
- Waveband: GSM,UMTS,LTE

## SENDING/RECEIVING THROUGHPUT

- Incoming transmission rate: up to 8x 30 SMS/min
- Outgoing transmission rate: up to 8x 30 SMS/min

## SOFTWARE PLATFORM

- Operating system: Ubuntu 18.04
- built-in Apache2 web server
- built-in PostgreSQL database server
- built-in Postfix email server
- built-in SNMP agent
- built-in NTP-client
- built-in Failover (HA-cluster) service
- watchdog mechanism for 3G modems
- failover mechanism for built-in 3G modems
- modern responsive web interface

## Important Safety Information

---

This chapter provides important information about safety procedures. For your safety and that of your equipment, follow these rules for handling your device.

**WARNING:** Incorrect storage or use of your device may void the manufacturer's warranty. Failure to follow these safety instructions could result in fire, electric shock, or other injury or damage.

Always take the following precautions.

Disconnect the power plug from AC power source or if any of the following conditions exist:

- the power cord or plug becomes frayed or otherwise damaged
- you spill something into the case
- the device is exposed to rain or any other excess moisture
- the device has been dropped or the case has been otherwise damaged

Be sure about that the use of this product is allowed in your country and in the environment required. As with any other telecommunication equipment, the use of this product may be dangerous and has to be avoided in the following areas: where it can interfere with other electronic devices in environments such as hospitals, airports, aircrafts, etc.; where there is risk of explosion such as gasoline stations, oil refineries, etc.

It is responsibility of the user to enforce the country regulation and the specific environment regulation.

Do not disassemble the product; any mark of tampering will compromise the warranty validity.

Every device has to be equipped with a proper antenna with specific characteristics. The antenna has to be installed with care in order to avoid any interference with other electronic devices and has to be installed with the guarantee of a minimum 20 cm distance from the body. In case of this requirement cannot be satisfied, the system integrator has to assess the final product against the SAR regulation.

*DISCLAIMER: The manufacturer is not responsible for any damages caused by inappropriate installation, not maintaining the proper technical condition or using a product against its destination.*

## REGULATORY STATEMENTS

---

### EU declaration of conformity

---

Hereby, PROXIMUS Radoslaw Janowski, owner of SMSEagle brand, declares that the radio equipment type SMSEagle MHD-8100-3G, MHD-8100-4G is in compliance with Directive 2014/53/EU.

The full text of the EU declaration of conformity is available at the following internet address:  
[www.smseagle.eu/certification](http://www.smseagle.eu/certification)

### FCC compliance statement

---

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) this device must accept any interference received, including interference that may cause undesired operation.

**Note:**

This equipment has been tested and found to comply with the limits for a Class B device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a business/commercial non-residential environment. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

**Important:**

This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the manufacturer's instruction manual, may cause harmful interference with radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case you will be required to correct the interference at your own expense. The FCC regulations provide that changes or modifications not expressly approved by SMSEagle™ could void your authority to operate this equipment. This product has demonstrated EMC compliance under conditions that included the use of compliant peripheral devices (antennas) and shielded cables between system components. It is important that you use compliant peripheral devices and shielded cables between system components to reduce the possibility of causing interference to radios, televisions, and other electronic devices.

## Canadian regulatory statement

---

This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions:

- (1) this device may not cause interference, and
- (2) this device must accept any interference, including interference that may cause undesired operation of the device.

This Class B digital apparatus meets the requirements of the Canadian Interference-Causing Equipment Regulations.

*CAN ICES-3 (B)/NMB-3(B)*

## Disposal and recycling information

---

Your SMSEagle device contains lithium-ion battery for RTC backup. Dispose of the device and/or battery in accordance with local environmental laws and guidelines.

*European Union—Disposal Information*

The symbol above means that according to local laws and regulations your product shall be disposed of separately from household waste. When this product reaches its end of life, take it to a collection point designated by local authorities. The separate collection and recycling of your product at the time of disposal will help conserve natural resources and ensure that it is recycled in a manner that protects human health and the environment.

*For disposal in countries outside of the European Union*

This symbol is only valid in the European Union (EU). If you wish to discard this product please contact your local authorities or dealer and ask for the correct method of disposal.

## Restriction of Hazardous Substances Directive (RoHS)

---

### **European Union RoHS**

SMSEagle devices sold in the European Union, on or after 3 January 2013 meet the requirements of Directive 2011/65/EU on the restriction of the use of certain hazardous substances in electrical and electronic equipment ("RoHS recast" or "RoHS 2").
